Survey effect of metronidazole 0.75% gel on complications after mandibular molar teeth extraction

Protocol summary

Summary

The aim of this study was to see the effect of a 0.75% metronidazole gel on complications of problems after extraction of mandibular molar. Inclusion criteria was absent of local or systemic difficulties for teeth extraction, mandibular molar tooth that must be extracted. Symmetrical mandibular teeth in radiography that must be extracted. Exclusion criteria If teeth during extraction were broken or teeth need surgical extraction. Patients that use smoke or any drugs. This study was conducted on 20 males 20 to 30 years old during one year. For each patient two mandibular teeth were extracted. The 0.75% metronidazole gel was used in place of extracted teeth, as there was no material left in the other socket. After extraction the teeth, swelling, pain, dry socket was assessed and recorded.

Health conditions studied

1

Description of health condition studied

Inflammation due to tooth extraction

ICD-10 code

Y56.0

ICD-10 code description

Local antifungal, anti-infective and anti-inflammatory drugs, not elsewhere classified

Primary outcomes

1

Description

dry socket

Timepoint

72 hours after tooth extraction

Method of measurement

Observation

2

Description

pain

Timepoint

6,12, 24 and 48 hours after extraction tooth

Method of measurement

VAS

3

Description

swelling

Timepoint

6,12, 24 and 48 hours after extraction tooth

Method of measurement

facial index in mm

Secondary outcomes

empty

Intervention groups

1

Description

Intervention: Metronidazole 0.75% gel immediately after tooth extraction

Category

Treatment - Drugs

2

Description

Control: Any drug did not put in the tooth socket
