The effectiveness of mindfulness training with “mindfulness coach” mobile app on increasing the quality of life and reducing the symptoms of people with premenstrual syndrome

Protocol summary

Study aim

Evaluate the effectiveness of mindfulness training with Persian version of “mindfulness coach” mobile App on increasing the quality of life and reducing the symptoms of people with premenstrual syndrome.

Design

A clinical trial with experimental and control groups, with parallel, randomized groups, on 80 patients. Excel software rand function was used for randomization.

Settings and conduct

All steps are done through cyberspace. Each of the 80 samples is randomly assigned to one of the groups using the rand function of Excel software.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Minimum age 25 years and maximum 45 years; Higher education than diploma; Moderate to severe premenstrual syndrome (based on PSST questionnaire); Having regular menstruation (intervals between two menstrual periods 33-28 days and bleeding duration between 2 to 7 days); Access to the internet and smartphone Exclusion criteria: Any menstrual disorders in 3 months before the study; Simultaneous participation in other studies; Undergoing any medication to alleviate the symptoms of premenstrual syndrome; Physical or mental illness using self-report questionnaire and general health questionnaire;

Intervention groups

For the experimental group, 2 training sessions will be held via Skype, in which the mindfulness and how to use it by mobile App will be taught, then they will perform the exercises specified in the App for at least 15 minutes a day for 8 weeks. The control group is told that they are on the waiting list for training for 2 months.

Main outcome variables

Physical, emotional and behavioral symptoms of premenstrual syndrome; quality of life

Randomization (investigator's opinion)

Randomized

Randomization description

The sample members are selected by simple randomization method through the rand function of Excel software. In this way, with using the analysis ToolPak plugin, which is responsible for analyzing data using statistical techniques, using the Random Number Generation option and then placing the required parameters related to the production of a random number such as (number of variables, number of random numbers, statistical distribution, parameters The desired distribution random seed) and the selection of the discrete distribution (uniform distribution) will produce random or natural random numbers. Based on this, Excel software automatically assigns the sample members to the two groups of the research in a completely random way.

Health conditions studied

1

Description of health condition studied

premenstrual syndrome/Premenstrual tension syndrome

ICD-10 code

N94.3

ICD-10 code description

Premenstrual tension syndrome

Primary outcomes

1

Description

Physical symptoms of premenstrual syndrome

Timepoint

Before intervention, After intervention

Method of measurement

The Iranian version of the premenstrual symptoms screening tool (PSST); by answering question 14

2

Description

Emotional symptoms of premenstrual syndrome

Timepoint

Before intervention, After intervention

Method of measurement

The Iranian version of the premenstrual symptoms screening tool (PSST); by answering questions 1,2,3,4,13

3

Description

Behavioral symptoms of premenstrual syndrome

Timepoint

Before intervention, After intervention

Method of measurement

The Iranian version of the premenstrual symptoms screening tool (PSST); by answering questions 5-12

4

Description

Quality of life

Timepoint

Before intervention, After intervention

Method of measurement

12-Item short form survey health-related quality of life questionnaire(SF-12).

empty

Intervention groups

1

Description

Intervention group: This group receives mindfulness training. Initially, 2 training sessions will be held via Skype, in which the concepts related to mindfulness and how to use it by the software will be taught, then the participants will be asked to do at least 15 minutes of exercises specified in the software for 8 weeks a day. The content of 8 software sessions is: Week 1: mindful eating exercise (Audio); your experience of mindful eating; body scan exercise (audio); your experience of body scanning; first week lesson; homework. Week 2: breathing with mindfulness; meditation situations (video); acoustic breathing awareness training; remembering and forgetting; four important skills; second week lesson; homework. Week 3: mindfulness of body movement; practice to the point of endurance; conscious mind stretching movements (audio and video); audio breathing practice in three steps; physical barometer; approach and avoidance; homework. Week 4: managing reactions; learn the answer instead of the reaction; conscious mind walking (audio); what is anxiety? mindfulness of breathing and body (audio); mindfulness of sounds and thoughts (audio); inevitable consciousness (audio); attention with valve activity; homework. Week 5: accept all experiences; resilience; practicing companionship with unpleasant emotions (audio); be kind to yourself; practice breathing in three steps; homework. Week 6: give meaning; mindfulness and mental production; the conscious connection of the mind with thoughts; mindfulness with thoughts (audio); three ways to deal with distress; useless thought pattern; using breathing exercises to counteract thoughts; homework. Week 7: take good care of yourself; apply breathing exercises and choose a practical step; act mindfully; anxiety indicators and practical strategies;

energizing and debilitating activities; homework. Week 8: living with the mindfulness, stay mindful, 21 keep mindfulness exercises to mindfulness in the workplace.
