

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

Determination of the pathological response of localized or locally advanced esophageal carcinoma to induction chemotherapy and concurrent chemotherapy with hypofractionated radiotherapy before surgery.

Protocol summary

Study aim

Determination of the pathological response of localized or locally advanced esophageal carcinoma to induction chemotherapy and concurrent chemotherapy with hypofractionated radiotherapy before surgery.

Design

An interventional trial, phase 2, without a control group, on 43 patients

Settings and conduct

Patients with esophageal cancer who have endoscopic biopsy confirming the diagnosis of SCC or adenocarcinoma and are referred to Omid, Imam Reza, and Hasheminejad hospitals in Mashhad are considered. Patients undergoing staging workup with barium swallowing x-ray and CT scan of the thorax and abdomen for local and distant lymphatic metastasis. Patients suspected of having a primary T1 or T4 tumor Will also be reviewed with endoscopic ultrasonography. Routine laboratory tests, including complete blood counts, liver and kidney function tests, and blood albumin levels are also requested.

Participants/Inclusion and exclusion criteria

Inclusion criteria: The presence of carcinoma in the thoracic or abdominal esophagus; Functional status greater or equal to 70% of the Karnofsky standard or equal or less than one of the ECOG standard; Presence of grade 3 and higher dysphagia or disease stage in T(2-4) N(0) M(0) or (any)T N(+) M(0) based on staging findings; Consent to complete the treatment program, including surgery. Exclusion criteria: Existence of metastatic disease; Presence of cervical esophageal carcinoma; Existence of invasion to heart, trachea, bronchus or aorta; Dissent to surgery; Existence of a previous history of cancer or other comorbidities that prevent the full implementation of the treatment program.

Intervention groups

Patients with esophageal carcinoma will undergo induction chemotherapy and then concurrent chemotherapy with hypofractionated radiotherapy, and after that tumor removal surgery will be performed for the patients.

Main outcome variables

Rate of pathological response

Scientific title

Determination of the pathological response of localized or locally advanced esophageal carcinoma to induction chemotherapy and concurrent chemotherapy with hypofractionated radiotherapy before surgery.

Public title

hypofractionated radiotherapy in esophageal carcinoma

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

carcinoma in thoracic or abdominal esophagus
performance status above or equal to 70% in karnofsky
criteria or less or equal to 1 in ECOG criteria presence of
3rd grade or more dysphasia or disease in T2-T4 N0 M0
or any T N+ M0 stage consent to the whole treatment
program including surgery

Exclusion criteria:

presence of metastatic disease presence of cervical
esophagus invasion to heart, trachea, bronchus or aorta
dissent to surgery history of cancer or other diseases
that interfere to complete the treatment program

Age

No age limit

Gender

Both

Phase

2

Health conditions studied**1****Description of health condition studied**

esophageal cancer

ICD-10 code

C15.9

ICD-10 code description

Malignant neoplasm of esophagus, unspecified

Primary outcomes**1****Description**Percentage of pathological response based on tumor
necrosis in microscopic examination**Timepoint**4 weeks after completion of neoadjuvant
chemoradiotherapy**Method of measurement**

Pathological evaluation

Secondary outcomes**1****Description**

scale of dysphagia

Timepoint

before the intervention and after completing treatment

Method of measurement

dysphagia severity scale

Intervention groups**1****Description**

Intervention group: Received 3 to 5 courses of weekly induction chemotherapy with paclitaxel (50 mg / m2) and carboplatin (AUC 2) followed by hypofractionated radiotherapy with a total dose of 40 Gy and 2.5 Gy per fraction
