

Clinical Trial Protocol

Iranian Registry of Clinical Trials

05 Jul 2026

The effect of garlic supplementation on risk factors for cardiovascular disease and renal function in patients with diabetic nephropathy

Protocol summary

Study aim

Determining the effect of garlic supplementation on risk factors for cardiovascular disease and renal function in patients with diabetic nephropathy

Design

randomized clinical trial, double-blind, randomized control group of 60 patient. Randomization is done using a valid website and a 4-block method.

Settings and conduct

This clinical trial study will be performed in the office of a nephrologist. Researchers, participants will be unaware of the allocation of treatments.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Diabetic nephropathy confirmed by a specialist, clinically in stage 3 (eGFR equal to 30 to 59) or stage 4 (eGFR equal to 15 to 29) chronic kidney disease not performing hemodialysis or peritoneal dialysis, lack presence of liver, gastrointestinal, stroke and ischemic heart disease (3 months after myocardial infarction and ischemia), pulmonary disease (asthma and COPD), cancer, hypothyroidism and hyperthyroidism, gastric ulcer, infectious Especially hepatitis, allergy to garlic No pregnancy and lactation, not consuming anticoagulants such as heparin, warfarin, apixaban, yuaroxaban, penicillamine and 3 months after taking antibiotics No history of taking garlic supplements and no special diet in the last 3 months, no smoking, being in the age range of 25 to 75 years

Intervention groups

Intervention group containing: 2 Garlic tablets (each tablet contains 400 mg of garlic powder) twice a day after lunch and dinner, control group 2 placebo tablets each containing 400 mg of corn starch twice a day after lunch and dinner

Main outcome variables

Anthropometric indices, glycemic indices, lipid indices, systolic and diastolic blood pressure

General information

Reason for update

Changing the dose of the drug, placebo and the name of the company producing the drug and placebo used in the intervention group

Scientific title

The effect of garlic supplementation on risk factors for cardiovascular disease and renal function in patients with diabetic nephropathy

Public title

Garlic supplementation in patients with diabetic nephropathy

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Diagnosis of diabetic nephropathy confirmed by a specialist - - being in the age range of 25 to 75 years clinically in stage 3 (eGFR equivalent to 30 to 59) or stage 4 (eGFR equivalent to 15 to 29) chronic kidney disease age 25-75 years old

Exclusion criteria:

not performing hemodialysis or peritoneal dialysis presence of liver, gastrointestinal, stroke and ischemic heart disease (3 months after stroke and ischemic heart disease), pulmonary disease (asthma and COPD), cancer, hypothyroidism and hyperthyroidism, gastric ulcer, infectious especially hepatitis, garlic allergy No pregnancy and lactation not consuming drugs of anticoagulants such as heparin, warfarin, apixaban, uvaroxaban, penicillamine and 3 months after taking antibiotics No history of taking garlic supplements and no special diet in the last 3 months Not smoking

Age

From **25 years** old to **75 years** old

Gender

Both

Phase

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization is done individually. Entry of each patient into the intervention or control group is done randomly with the help of 4 blocking. This is done using a valid random number generation website. (Random number generation website: <https://www.sealedenvelope.com/simple-random/iser/v1/lists>)

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, patients are unaware of received intervention. Also, before beginning of intervention, garlic and placebo supplements, which are completely similar to each other, will be coded in A and B by a third person other than main researcher to keep the blinding of the study.

Intervention groups

1

Description

Intervention group: Intervention group will receive 2 Garcin tablets made by Goldaru Isfahan Pharmaceutical Company each tablet containing 300 mg of garlic powder 1800-1200 micrograms of allicin and is equivalent to approximately 2 grams of fresh garlic twice a day after lunch and dinner for 8 weeks

Category

Treatment - Drugs

2

Description

Control group: The Control group will received 2 placebo tablets made by Goldaru Isfahan Pharmaceutical Company each tablet containing 300 mg of cornstarch twice a day after lunch and dinner for 8 weeks.

Category

Placebo
