Effects of the hypocaloric DASH diet on metabolic parameters, inflammatory factor and biomarkers of oxidative stress in overweight and obese women with polycystic ovary syndrome

Protocol summary

Study aim

The aim of this study is to determine the effects of the Dietary Approaches to Stop Hypertension (DASH) diet on metabolic profiles, inflammatory factor and biomarkers of oxidative stress in overweight and obese women with polycystic ovary syndrome (PCOS).

Design

Study design: parallel single-blind randomized controlled clinical trial.

Settings and conduct

Among patients with PCOS referred to Naghavi outpatient Clinic affiliated to Kashan University of Medical Sciences, 108 patients will be selected according to inclusion and exclusion criteria. Participants are unaware of the study groups. Fasting blood samples will be taken at baseline and 8 weeks after the intervention. At the beginning and the end of the intervention: 8 weeks.

Participants/Inclusion and exclusion criteria

Inclusion and Exclusion Criteria: Women aged 18-40 years with overweight and obese diagnosed with PCOS will be included in this study. Individuals with neoplastic, cardiovascular disorders, malabsorptive disorders, current or previous (within the last 6 months) use of hormonal, antidiabetic medications and anti-obesity medications will be excluded in the study.

Intervention groups

Intervention: Patients will be assigned to receive either the DASH diet (intervention group 1: n=27) or the standard diet (control group 1: n=27) and the DASH diet (intervention group 2: n=27) or the standard diet (control group 2: n=27).

Main outcome variables

Outcomes: Hs-CRP and LDL-cholesterol (primary outcomes) and glycemic control, other lipid profiles, biomarkers of inflammation and oxidative stress (secondary outcomes) will be quantified at study

baseline and end-of-trial

Scientific title

Effects of the hypocaloric DASH diet on metabolic parameters, inflammatory factor and biomarkers of oxidative stress in overweight and obese women with polycystic ovary syndrome

Public title

Effect of diet therapy in treatment of polycystic ovary syndrome

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Women aged 18-40 years Diagnosed with PCOS

Exclusion criteria:

Individuals with neoplastic Cardiovascular disorders
Malabsorptive disorders Current or previous (within the last 6 months) use of hormonal Antidiabetic medications
Anti-obesity medications

Age

From **18 years** old to **40 years** old

Gender

Female

Sample size

Target sample size: **108**

Randomization (investigator's opinion)

Randomized

Randomization description

At first, patients were randomly allocated into two groups to take either DASH diet or control. Randomization will be done by the use of computer-generated random numbers.

Blinding (investigator's opinion)

Single blinded

Blinding description

Participants are unaware of the study groups.

Placebo
