Effect of hyaluronic acid(HA) on scaling & root planning treatment in patients with chronic periodontitis

Protocol summary

Study aim

Effect of hyaluronic acid(HA) on scaling & root planning treatment in patients with chronic periodontitis

Design

One-blind randomized controlled clinical trial, phase 3 on 24 patients. Randomization of this study is done using a table of random numbers, which is done with Random Allocation software.

Settings and conduct

In this one-blind study, 24 patients with moderate to severe chronic periodontitis who refer to the periodontology department of Shahid Sadoughi Dental School of Yazd for periodontal treatment will be randomly selected and examined.

Participants/Inclusion and exclusion criteria

Patients should be systemically healthy: have at least 5 teeth per maxillary quadrant; and have moderate to severe chronic periodontitis. No allergy to hyaluronic acid; They should also not be treated orthodontically and should not use mouthwash for the past 6 months.

Intervention groups

The gel is injected in one quadrant and the other quadrant is the control group.

Main outcome variables

Plaque index; Bleeding on probing; Clinical attachment loss; Pocket depth

Sample size

Target sample size: **24**

Randomization (investigator's opinion)

Randomized

Randomization description

We will define a code for each patient with moderate to severe chronic periodontitis, who have referred to the periodontal department of the dental school for periodontal treatment and are eligible to enter the study, and we will enter these codes in the Random Allocation software. . Then, using software, we randomly select 36 codes in two groups of 18 to enter the study.

Blinding (investigator's opinion)

Primary outcomes

1

Description

Probing depth

Timepoint

Beggining of study and 6 week later

Method of measurement

Williams probe

2

Description

Clinical Attachment Loss

Timepoint

Beggining of study and 6 week later

Method of measurement

Using the Williams probe

3

Description

Bleeding on probing

Timepoint

Beggining of study and 6 week later

Method of measurement

by observation of Bleeding on probing in the mouth and measuring its percentage

4

Description

plaque index

Timepoint

Beggining of study and 6 week later

Method of measurement

observation of plaque

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: non-surgical periodontal treatment

and use 1% hyaluronic acid gel subcutaneously twice with an interval of one week in the right quadrant of the maxilla

Category

Treatment - Drugs

2

Description

Control group: non-surgical periodontal treatment in the left quadrant of the maxilla

Category

Treatment - Other
