

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

The effects of crocin on nicotine dependence, depression, anxiety and metabolic biomarkers in cigarette smokers

Protocol summary

Study aim

The aim of this study is to determine the effects of crocin on nicotine dependence, depression, anxiety and metabolic biomarkers in cigarette smokers.

Design

Clinical trial with control group, parallel groups, double-blind (both patients and researchers), randomized, 60 patients, phase 2

Settings and conduct

Population and sample size: 60 eligible cigarette smokers and referred to Gholabchi Clinic affiliated to Kashan University of Medical Sciences, Kashan, Iran will be selected in the study. Participants, investigators or the assessors of the outcomes are unaware of the study groups. Supplements and placebos are similar in shape and size. Fasting blood samples will be taken at baseline and 12 weeks after the intervention. Time of intervention: 12 weeks.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Cigarette smokers and aged 17 to 50 years will be included in this study. Exclusion criteria: Unwillingness to cooperate.

Intervention groups

Intervention: Patients will be assigned to receive either crocin (n=30) or placebo (n=30).

Main outcome variables

Nicotine dependence; depression; anxiety (primary outcome) and metabolic biomarkers (secondary outcome) will be quantified at study baseline and end-of-trial.

Scientific title

The effects of crocin on nicotine dependence, depression, anxiety and metabolic biomarkers in cigarette smokers

Public title

Effect of crocin in cigarette smokers

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Smoking dependence Age of 17 to 50 years old Complete informed consent

Exclusion criteria:
Unwillingness to cooperate Taking crocin, anti-inflammatory and antioxidant supplements during the last 3 months before the intervention. History of metabolic diseases including diabetes, hypertension, thyroid, and cardiovascular disease. Pregnant women Positive urine test for morphine, methamphetamine and cannabis Use of psychiatric and neurological drugs such as benzodiazepines and antidepressants

Age
From **17 years** old to **50 years** old

Gender
Both

Phase
2

Groups that have been masked

- Participant
- Investigator
- Outcome assessor

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization will be performed with simple method and random numbers generated by computer software (Stat Trek software) which choose the random numbers. Then, we consider the specific numbers for both groups for example: the even numbers are for intervention group and the odd numbers are for the placebo group.

Blinding (investigator's opinion)
Double blinded

Blinding description
Randomization and allocation will be concealed from the researchers and participants until the final analyses are completed. Another person at the clinic, who is not involved in the trial and not aware of random sequences, will be assigned the participants to the numbered bottles of supplements. Supplements and placebos are only the code is written on the packages. Patients and researcher do not know the type of intervention and after analyzing the data, packet codes are decoded.

Intervention groups

1

Description

Intervention group: In this group of patients (n=30) will be requested to take two crocin tablets daily for 12

weeks (each tablet contain 15 mg crocin). The crocin tablets will be produced in the pharmacy faculty of Mashhad University of Medical Sciences from saffron.

Category

Treatment - Drugs

2**Description**

Control group: In this group of patients (n=30) will be requested to take two placebo tablets daily for 12 weeks. The placebo tablets (Contain Avicel) will be produced in the pharmacy faculty of Mashhad University of Medical Sciences.

Category

Placebo
