Effect of theory based educational intervention for Eivan's youth encouraging to register organ donation cards

Protocol summary

Study aim

Determining the effectiveness of theory-based education on encouraging the youth of Ivan city to receive organ donation cards

Design

مطالعه از نوع تجربی با پیش-پس آزمون و گروه شاهد و سه سوبه کور است. حجم نمونه 40 نفر برای هر کدام از گروههای مداخله و کنترل است

Settings and conduct

This study is an experimental type (with pre-test, post-test and control group. The statistical population is 18-30 young people in Ivan city. The sampling method is multi-stage cluster). A researcher-made questionnaire including demographic questions and constructs of the theory of planned behavior regarding organ donation is used to collect information. After the pre-test, the educational intervention on the structures of planned behavior for the intervention group through lectures and questions and answers using researcher-made educational media including posters, pamphlets, etc. during seven sessions during a The moon is held. Two months after the end of the intervention, the questionnaire is completed by both groups. The control group did not receive any educational intervention.

Participants/Inclusion and exclusion criteria

- Conscious satisfaction of young people
- Physical health
- No history of organ donation (self and family)

Intervention groups

After obtaining the consent of the participants and collecting the pre-test data, a one-month training program is implemented for the intervention group.

Main outcome variables

Strengthen the intention of the intervention group to receive a member donation card

Scientific title

Effect of theory based educational intervention for Eivan's youth encouraging to register organ donation cards

Public title

Effect intervention to organ donation cards

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Conscious satisfaction of young people Physical health

No history of organ donation (self and family)

Exclusion criteria:**Age**

From **18 years** old to **30 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomly through cluster sampling, one group is assigned to the intervention group and another group to the control group.

Blinding (investigator's opinion)

Not blinded

Method of measurement

questionnaire

Secondary outcomes

empty

Intervention groups**1****Description**

After obtaining the consent of the participants and collecting the pre-test data using a questionnaire, a one-month training program is implemented in line with the structures of the theory of planned behavior for the intervention group. Due to the interference of the dissertation with the outbreak of coronavirus, educational intervention is done in a virtual context by forming a WhatsApp group. Before the intervention, educational media including pamphlets, tracts, etc. on the subject of organ donation with the aim of increasing self-awareness are provided to the intervention group. The training lasts for one month (seven sessions) and each session lasts for one hour (20:00 to 21:00). Topics of organ donation history, brain death and brain structure, common beliefs, religious attitudes, organ donation process, persuasion and registration method in the organ donation card receiving system plus questions and answers will be held during the first to seventh sessions, respectively. In conducting training sessions, audio, video, image, etc. are used. After the implementation of the training program, the necessary follow-up regarding the training will be done.
