The effect of mindfulness-based counseling on childbirth experience and support and control among nullipar women: a randomised controlled clinical trial

Protocol summary

Study aim

The effect of mindfulness-based counseling on experience, support and control of childbirth

Design

A clinical trial study on 64 primiparous mothers (32 in the intervention group and 32 in the control group) using RAS (Random Allocation Software) software with a size of four or six blocks and an allocation ratio of 1 : 1 will be divided into two groups receiving counseling and control group.

Settings and conduct

The research environment will be Taleghani and Al-Zahra teaching hospitals. Before the intervention and 24 hours after delivery, the participants will complete the questionnaires of delivery experience, support and control, and pain delivery.

Participants/Inclusion and exclusion criteria

Inclusion criteria: first delivery!live fetus! cephalic singleton! tendency to give birth in Al-Zahra and Taleghani hospitals!lack of mental disability and deafness. Inclusion criteria: history of pre-pregnancy mental disorders according to the patient! abnormal volume of amniotic fluid! nst non-reactive!Fetal abnormalities! Have any surgery on the uterus! Have a high-risk pregnancy! Pregnancy with the help of assisted reproductive techniques!

Intervention groups

Intervention group: Receiving a counseling program with a mindfulness approach will be done in 8 45-minute group sessions. Control group: Routine care training in pregnancy will be held as a session every week online and in person.

Main outcome variables

Childbirth experience score, support and control score, labor pain score, labor fear score

Scientific title

The effect of mindfulness-based counseling on childbirth experience and support and control among nullipar women: a randomised controlled clinical trial

Public title

The effect of mindfulness-based counseling on nulliparous women

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

The first delivery Live cephalic single fetus Tendency to give birth in Al-Zahra and Taleghani hospitals Lack of mental disability and deafness

Exclusion criteria:

1. History of pre-pregnancy mental disorders according to the patient 3. 4. 5. 6. 7. 8. 9. 10. Abnormal volume of amniotic fluid NST non-reactive Fetal malformations Have any surgery on the uterus Having high-risk pregnancies such as hypertension, diabetes, placenta previa, cardiovascular disease and other chronic diseases, bleeding in the third trimester, placental abruption, placenta previa, fetal growth disorder Pregnancy with the help of assisted reproductive techniques The desire to receive other pharmacological and non-pharmacological analgesics Unplanned pregnancy Any contraindications for vaginal delivery, including pelvic series mismatch

Sample size

Target sample size: 64

Randomization (investigator's opinion)

Randomized

Randomization description

Participants using the RAS(Random Allocation Software)with the size of 4 and 6 blocks and quotas based on the type of labor pain onset (spontaneous or induction) and with a ratio of 1: 1 to the two groups receiving mindfulness counseling and allocation control group Will be given. Blocking was performed by a person not involved in sampling and data analysis. For concealment, the intervention type assignment will be written on a piece of paper and placed in matte envelopes and numbered in a row. These envelopes will be opened in the presence of the mother and by a person not involved in sampling (in charge of the hospital clinic) and the type of group will be informed to the mother.

Health conditions studied**1****Description of health condition studied**

childbirth experience and support and control

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Childbirth experience score

Timepoint

24 hours after delivery

Method of measurement

Denker Childbirth Experience Questionnaire

2**Description**

Support and control score

Timepoint

Before intervention and 24 hours after delivery

Method of measurement

Support and control questionnaire

Secondary outcomes

1

Description

Pain perception score

Timepoint

Dilatation at 6 cm and 24 hours after delivery

Method of measurement

Childbirth pain questionnaire Visual Analog Scale

2

Description

Fear of childbirth score

Timepoint

Dilatation at 6 cm and 24 hours after delivery

Method of measurement

Fear of childbirth in the labor stage will be using the WDE-Q (A) questionnaire and in the postpartum stage with the WDE-Q (B) fear of childbirth questionnaire.

Intervention groups

1

Description

Intervention group: Pregnant mothers who are in the mindfulness group, for 8 sessions of counseling program with the content of mindfulness as walking: walking slowly and intentionally and paying attention to movements, weight changes and balance and sensations in the legs that are related to walking. The process of eating: continues by feeling the raisins in the mouth, biting them, paying attention to the taste and texture, and the sensations and movements of the mouth and throat while chewing and swallowing the raisins.

Awareness is done. Body scan: When lying on your back for 40 minutes, your attention is directed to different parts of your body (from toes to head) and you pay attention to the emotions in every part of your body with openness and curiosity. Sitting meditation: In a sitting position, the person is asked to pay attention to the feelings and movements of breathing. The person is instructed to pay attention to bodily feelings without judgment and acceptance. Yoga: Slow and gradual yoga Hatha Consciously nurtures the body when moving, stretching or maintaining a posture. Enters the body slowly and deeply into a dome-shaped body and abdomen, and then exhale very slowly without any pressure or contraction. It will be a minute. The assignments requested from the mothers in cyberspace will be reviewed by the researcher and the mother will be given feedback. Finally, after hospitalization and stabilization in the delivery room for each of the women in the mindfulness group, she will be reminded of the trainings of mindfulness techniques and in order to perform the steps of mindfulness correctly during labor and dilation of six centimeters (Active phase of labor) will guide.

Category

Behavior

2

Description

Control group: For the control group of routine care training (Trainings based on the educational content of physiological delivery, including nutritional, health, exercise and information's about physiological delivery and pain relief delivery methods) in pregnancy will be held as a session every week online and in person.
