

Clinical Trial Protocol

Iranian Registry of Clinical Trials

01 Jun 2026

Evaluation of the effect of nanostructured lipid carriers containing latanoprost to control androgenic alopecia

Protocol summary

Study aim

The effect of latanoprost-containing lipid nanocarriers on androgenic alopecia

Design

Clinical trial with control group, not blinded, with parallel groups, non-randomized, phase 3, and 16 patients

Settings and conduct

In order to evaluate the effectiveness of lipid nanoparticles containing latanoprost in compare with it's solution, a study will be performed on 16 male volunteers aged 25-50 years with manifestations of androgenic hair loss. All volunteers will take both formulations of the drug at home once every 3 days. And their photography will be done and compared in a beauty clinic under the supervision of a dermatologist.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Male, age between 23 to 50 years, with androgenic alopecia Exclusion criteria: History of skin cancer, manifestations of skin disease in the desired area, history of hair transplantation

Intervention groups

Evaluation of the effect of lipid nanocarriers containing latanoprost in volunteers with androgenic alopecia on the right side of the head and a solution containing latanoprost on the left side of the head

Main outcome variables

Hair loss; Number and thickness of hair strands

Scientific title

Evaluation of the effect of nanostructured lipid carriers containing latanoprost to control androgenic alopecia

Public title

The effect of nanostructures of Latanoprost on male pattern hair loss

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Male gender Age between 23 to 50 years manifestations

of androgenic hair loss

Exclusion criteria:

History of skin cancer History of physical therapy on the scalp during the last 6 months Manifestations of skin disease in the desired area History of hair transplantation

Age

From **23 years** old to **50 years** old

Gender

Male

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **16**

More than 1 sample in each individual

Number of samples in each individual: **2**

One sample contains latanoprost solution and the other sample contains latanoprost nanoparticles.

Randomization (investigator's opinion)

N/A

Androgenic alopecia

Primary outcomes

1

Description

Hair diameter

Timepoint

Before starting treatment and also at weeks 4, 8, 12, 16, 20 and 24

Method of measurement

Trichoscope

2

Description

Hair color

Timepoint

Before starting treatment and also at weeks 4, 8, 12, 16, 20 and 24

Method of measurement

Trichoscope

3

Description

hair density

Timepoint

Before starting treatment and also at weeks 4, 8, 12, 16, 20 and 24

Method of measurement

Trichoscope

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Evaluation of the effect of lipid nanostructures containing latanoprost in the form of lotion on androgenic hair loss in male volunteers who will take the drug every 3 days for 6 months in amount of 0.25 cc with a 0.2% concentration on the right side of their head.

Category

Treatment - Drugs

2

Description

Evaluation of the effect of latanoprost solution on

androgenic hair loss in comparison with its nanolipid form in male volunteers who take the drug every 3 days for six months in amount of 0.25 cc with a concentration of 0.02% on the left side of the head.
