

Clinical Trial Protocol

Iranian Registry of Clinical Trials

08 Jul 2026

Comparison of the effectiveness of virtual clinical round on self-efficacy and clinical competence in midwifery students

Protocol summary

Study aim

The effect of "virtual roundtable" on self-efficacy and clinical competence of midwifery students

Design

Clinical trial with control group, with parallel groups, randomized allocation, on 64 midwifery students,

Settings and conduct

The research site is Shahid Beheshti Hospital in Isfahan and only students will be blind. The intervention group will use a virtual clinical round and the control group will use the usual method for in-clinic training. Before and after training in both groups, self-efficacy and clinical competence will be assessed by a questionnaire.

Participants/Inclusion and exclusion criteria

Having conscious satisfaction, physical and mental ability to participate in the study and having an Android mobile phone

Intervention groups

Students are asked to collect items related to a case in groups of 5, including history, examination, diagnosis and treatment, and to examine it in a virtual and online classroom using the Skyroom. The student's strengths and weaknesses are also presented in writing or virtually by the presenter after the session.

Main outcome variables

Clinical self efficacy: clinical competence

Scientific title

Comparison of the effectiveness of virtual clinical round on self-efficacy and clinical competence in midwifery students

Public title

The effect of virtual clinical round on self-efficacy and clinical competence in midwifery students

Purpose

Health service research

Inclusion/Exclusion criteria

Inclusion criteria:

Conscious consent to participate in the study Pass at

least 4 theory units of pregnancy and practical childbirth

Exclusion criteria:

Age

No age limit

Gender

Female

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 64

Randomization (investigator's opinion)

Randomized

Randomization description

Undergraduate students, after explaining the objectives of the research, will be placed in a test group and a control group based on the criteria for entering the simple random method. Students' self-efficacy and clinical competency will be assessed before and after the clinical education round. Immediately after the intervention, all participants will take a post-test.

Blinding (investigator's opinion)

Not blinded

Title and more details about the data/document

Published in the field of medical and midwifery education

When the data will become available and for how long

To be shared after the end of the study.

To whom data/document is available

For researchers working in academic and scientific institutions, to be shared after the end of the study.

Under which criteria data/document could be used

At the end of the study, a summary of the article should be shared with researchers working in academic and scientific institutions.

From where data/document is obtainable

After the end of the study, share email addresses for applicants.

What processes are involved for a request to access data/document

After the study, applicants can request access to the files by visiting the e-mail address
