The effects of Core Stabilization Vs. Balance-Training Programs on knee proprioception and dynamic balance in healthy female athletes

Protocol summary

Study aim

Effects of core stability and balance training on balance and proprioception.

Design

Subjects will be randomized to one of two training groups : 1.Core-stability training, 2. Balance training.

Randomized double-blind randomized clinical trial on 20 female athletes.

Settings and conduct

Participants are selected from the female soccer player referred to the Kermanshah sports gyms. In the first session, personal information is recorded. There is a physiotherapist who is not aware of the results of the evaluations. Blinding is performed on participants, examiners, and therapist. Group assignments and interventions are performed by a physiotherapist who is not aware of the results of the evaluations.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Female gender Aged between 20 and 30 years Participating in soccer unprofessionally Full satisfaction to participate in the research Exclusion criteria : Previous lower-extremity or lumbar-spine pathology or surgery within the past 6 months Neurological, vestibular, or visual disorder in the past 6 months If they failed to complete the pretest or posttest, or failed to participate in a minimum of 80% of the training sessions. If they were currently participating in another training program

Intervention groups

Subjects will be divided into two groups of: 1:Core-stability training group : The protocol consist of 3 progressive levels of exercises focusing on strengthening the abdominal low-back, and pelvic muscles. 2.Balance training group: progressive with open or closed eyes on the double legs or single leg.

Main outcome variables

Dynamic balance, knee proprioception.

Scientific title

The effects of Core Stabilization Vs. Balance-Training Programs on knee proprioception and dynamic balance in healthy female athletes

Public title

Effects of Stability and Balance-Training Programs on knee proprioception and balance in healthy female athletes.

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

1.Female gender 2.Aged between 20 and 30 years 3.Participating in soccer unprofessionally 4.Full satisfaction to participate in the research

Exclusion criteria:

1.Previous lower-extremity or lumbar-spine pathology or surgery within the past 6 months 2.Neurological, vestibular, or visual disorder in the past 6 months 3.Taking any medications that could affect balance 4.If they were currently participating in another training program 5.If they failed to complete the pretest or posttest, or failed to participate in a minimum of 80% of the training sessions (16 of 18 sessions)

Age

From **20 years** old to **30 years** old

Gender

Female

Phase

N/A

Groups that have been masked

- Participant
- Investigator
- Outcome assessor

Sample size

Target sample size: **20**

Randomization (investigator's opinion)

Randomized

Randomization description

According to the number of participants in each group, the type of training is written on a piece of paper as " core stability training" or " balance training" and placed in envelopes. Randomly removes one of the envelopes and practice the participant based on the type of the training specified in it. And the envelopes are mixed again.

Blinding (investigator's opinion)

Double blinded

Blinding description

The study will be double-blinded. The participants will be blind to the type of intervention in relation to their training group as well as the researcher who must enter the data into the relevant checklist.

Health conditions studied**1****Description of health condition studied**

Healthy female athletes

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Knee proprioception

Timepoint

Pretest: one week before the beginning of the training program Posttest: immediately after the conclusion of the 6-week program.

Method of measurement

JPST values will be done by using camera, skin markers and computer software (photogrammetry). this test starts with the subjects in a seated position while the leg is resting at 90u of flexion. The examiner passively extend the leg at a rate of 10u/s, starting from 90u, to an index angle between 30u and 60u of flexion.

Secondary outcomes**1****Description**

Dynamic balance

Timepoint

Pretest: one week before the beginning of the training program Posttest: immediately after the conclusion of the 6-week program.

Method of measurement

MSEBT: the subject balance on the dominant leg in the center of a star-pattern testing area. Before performing the test, a leg-length measurement is taken to normalize reach distance to leg length. Each subject will be then instructed to reach with the non-weight-bearing leg as far as she could in each of the 3 directions while maintaining single-leg stance

Intervention groups

1

Description

participants will be randomized to one of two training groups. 1) core stability training group 2) balance training group. The protocol for the core stabilization training program is 3 progressive levels of exercises focusing on strengthening the abdominal low-back, and pelvic muscles while maintaining neuromuscular control. The sets and repetitions and holding times for each exercise for each week are fixed at 3 sets of 20 seconds for isometric holding activities and 20 repetitions for activities with isotonic contractions. Subjects in the intervention group 2 perform a 5-phase balance training program.

Title and more details about the data/document

The data of research and its analysis will be available to researchers if they request it.

When the data will become available and for how long

After the publication of articles resulting from the research

To whom data/document is available

Researchers working in academic institutions

Under which criteria data/document could be used

The data are available only to other researchers to study and evaluate treatment outcomes.

From where data/document is obtainable

By sending an email to the corresponding author.

What processes are involved for a request to access data/document

Sending an email to the corresponding author and request the data.
