The effect of palliative care at home on the quality of life of the elderly with heart failure discharged from the heart wards

Protocol summary

Study aim

Determining the effect of palliative care at home on the quality of life of the elderly with heart failure discharged from heart wards

Design

Randomized clinical trial with control group, with parallel groups, without blinding

Settings and conduct

Selection of 100 patients with heart failure referred to the cardiac ward of Kerman University of Medical Sciences and divided into two groups of control and intervention

Participants/Inclusion and exclusion criteria

1.The elderly with a definitive diagnosis of chronic heart failure by a cardiologist, class III or IV heart failure in the New York Heart Association classification. 2.Ability to communicate and no speech or hearing problems. 3.Have the mental ability to complete the questionnaire. 4.No mental illness and no use of drugs that affect the psyche. Exclusion criteria: death or withdrawal of participants from the study, lack of cooperation during the research

Intervention groups

The main purpose of palliative care in patients includes pain relief, physical symptoms, patient support and giving The meaning and concept of life is the end of life. The pretest questionnaire will be provided to the patient and he/she will be asked to complete the questionnaire form. With prior coordination for home care from hospital to home and with a well timed schedule, patients in the intervention group will receive eight individual sessions twice a week for eight and a half hours, in addition to receiving routine medical care. But patients in the control group will receive only routine medical intervention during this period. Finally, after the last care session and 1 month after the intervention, the quality of life questionnaire is completed by both groups to assess the quality of life.

Scientific title

The effect of palliative care at home on the quality of life of the elderly with heart failure discharged from the heart wards

Public title

The effect of palliative care at home on the quality of life

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

The elderly with a certain diagnosis of chronic heart failure Ability to communicate and non - speech problems and hearing problems Lack of mental illness Full consciousness at the time of research Willingness to participate in research

Exclusion criteria:

In case of unstable physical and emergency conditions (change in vital signs and inability of the patient to attend class) Failure to attend more than two training sessions Failure to answer more than a third of the questions

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

Samples will be selected by continuous sampling, and patients will be divided into control and test groups by Block Balanced Randomization (BBR). The allocation sequence will be done using the free web system <http://www.randomization.com/>. In this way, the number of subjects in each block is determined by 5 people and the letter A will be considered for the control group and the letter B will be considered for the experimental group. The assignment sequence will be created for 100 samples by combining the letters A and B. Finally, the cards containing the blocks will be placed inside the standard envelope, and as a result, the Allocation Concealment will be considered and observed. Based on the eligible samples, an envelope shuffling envelope will be randomly removed by the researcher, and the method of randomly assigning the research samples will be determined.

Heart failure

Primary outcomes

1

Description

Quality of life score in the Ferrans and Powers quality of life index, cardiac version - IV

Timepoint

Measurement of quality of life at the beginning of the study (before the intervention), after the intervention and 1 month after the intervention

Method of measurement

Ferrans and Powers quality of life index, cardiac version - IV

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: After the initial visit, which will be

performed jointly by a cardiologist and a researcher, in addition to receiving routine care in heart failure, they will be placed in palliative care twice a week for eight and a half hours in eight individual sessions. The educational content will first be narrated by experts in the field of palliative care to determine the validity and quality of education and then will be implemented by the researcher. The intervention includes the following topics: 1. Familiarity with heart failure, 2. Providing an introduction to the importance and necessity of self-care training in psychological and physical dimensions and monitoring symptoms, 3. Needs assessment of care of various organs of the body, physical effects, Psychology and Behavior of the Elderly and Family, 4. Assessing the Self-Care Ability, Stressful Situations, Social Interactions and the Elderly Relationship and Life and the Effects of Death Anxiety and Family Support and Emotional and Spiritual Support, 5. Implementing the Elderly and Family Client Education Programs Based on self-care needs, 6. Review coping strategies in stressful situations, and ways to cope with stress and depression, 7. Strengthen self-confidence, self-esteem, coping with anxiety and inefficiency. 8. At the end, review the previous sessions, prepare the family to complete the group sessions, focus on performing self-care activities. At the beginning of the sessions, patients will be members of the virtual groups. The researcher asks them to inform him / her if he / she has any questions about the research, and also asks the patients to express their successful and unsuccessful experiences in relation to the issues raised. Finally, after the intervention, patients will be followed for a month, during which the researcher will answer possible questions from patients in virtual groups.
