Assessment of the amniotic membrane effect on healing of anal fissure wound after surgery

Protocol summary

Study aim

Determining the effect of amniotic membrane on anal fissure wound healing

Design

This randomized- controlled parallel, open label clinical trial study will be conducted on 110 patients. the randomization will be done using Random allocation software.

Settings and conduct

In this open label clinical trial, patients with anal fissure wound will be enrolled. The patients will be divided randomly into two groups. In the intervention group, in addition to standard sphincterotomy surgery, two Cm2 of amniotic membrane prepared from the stem cell center of the Tehran University will be sutured to the margin of the anal fissure wound. In the control group, only standard sphincterotomy surgery will be performed.

Participants/Inclusion and exclusion criteria

This study will be conducted on patients suffering anal fissure. The exclusion criteria will be including Inflammatory bowel disease; past medical history of previous anal surgeries; BMI>30 kg/m2; and autoimmune diseases.

Intervention groups

In the intervention group, in addition to standard sphincterotomy surgery, two Cm2 of amniotic membrane prepared from the stem cell center of the Tehran University will be sutured to the margin of the anal fissure wound. In the control group, only standard sphincterotomy surgery will be performed.

Main outcome variables

The wound healing rate; anal pain

Scientific title

Assessment of the amniotic membrane effect on healing of anal fissure wound after surgery

Public title

Assessment of the amniotic membrane effect in anal fissure wound

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients with anal fissures Patients with no recovery despite treatment with fiber, topical ointment and hot tub for more than 3 weeks Having pain during defecation

Exclusion criteria:

History of inflammatory bowel disease Past medical history of previous anal surgeries BMI>30 kg/m2 Autoimmune diseases

Age

No age limit

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: 110

Randomization (investigator's opinion)

Randomized

Randomization description

Patients will be divided into intervention and control groups using block randomization based on generated numbers by random allocation software. Thus, in this software, first the number of groups and the total number of the sample size will be entered, and then in the block section, the Block randomization method will be selected. Patients will be allocated in intervention or control groups based on generated numbers.

Blinding (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Fissure wound

ICD-10 code

K60

ICD-10 code description

Fissure and fistula of anal and rectal regions

Primary outcomes

1

Description

Wound healing

Timepoint

1, 2, 3 and 4 weeks after surgery

Method of measurement

Clinical examination

2

Description

Duration of pain

Timepoint

Up to 4 weeks after surgery

Method of measurement

The number of days with pain

Secondary outcomes

1

Description

Wound infection

Timepoint

1, 2, 3 and 4 weeks after surgery

Method of measurement

Clinical examination

2

Description

Pruritus of wound

Timepoint

1, 2, 3 and 4 weeks after surgery

Method of measurement

Clinical examination

Intervention groups

1

Description

Intervention group: in addition to standard sphincterotomy surgery, two Cm2 of amniotic membrane prepared from the stem cell center of the Tehran University will be sutured to the margin of the anal fissure wound

Category

Treatment - Other

2

Description

In the control group, only standard sphincterotomy surgery will be performed.
