Protocol summary

Summary

Objective: A Comparative study on Uroflowmetry Index Improvement after Open Prostatectomy and Trans-Urethral Resection of Prostate (TURP) Material & methods: 70 patients with BPH, candidate for surgery, will randomly divided into two groups and each group will be operated by one of two methods. Uroflowmetry Before surgery and one month after the surgery will be performed and maximum and average urinary flow rate of each patient will be compared with himself and the whole groups will be compared.
