Comparing the diaphragmatic relaxation training and cognitive-behavioral therapy on sleep quality of the elderly

Protocol summary

Study aim

Comparison of diaphragmatic relaxation training and cognitive-behavioral therapy on sleep quality of the elderly referred to comprehensive health centers in Rafsanjan in 1400-1401

Design

75 eligible seniors will be divided into 3 groups (two intervention groups and one control group) using a simple random division method using a random number table, and the type of intervention will be determined again by random division.

Settings and conduct

On the elderly with sleep disorders referred to health centers in Rafsanjan, cognitive therapy intervention is performed in groups in the School of Nursing and diaphragmatic breathing is performed in groups for one session in the faculty and the project is continued in the elderly home.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1- Having an age above 60 years 2- Having a suitable level of cognitive function 3- Having the ability to read and write 4- Complete mastery of Persian language 5- Having written consent to participate in research 6- Having sleep disorders based on getting a score higher than 5 in the questionnaire Pittsburgh Exclusion criteria: 1 - unwillingness to continue cooperation 2 - deterioration of the patient's physical condition so that he can not cooperate

Intervention groups

Cognitive-behavioral therapy intervention is provided for 4 weeks (2 sessions of 60 minutes per week) under the supervision of a qualified instructor. Diaphragmatic breathing intervention group is invited to the faculty to practice a session in person and they are given practice. And the implementation of the plan is done by them at home. The control group will be explained in the Whats App group for 4 weeks about the problems that will be created in the aging process. The sleep quality of all participants in the study will be measured before,

immediately and one month after the intervention.

Main outcome variables

sleep quality

Scientific title

Comparing the diaphragmatic relaxation training and cognitive-behavioral therapy on sleep quality of the elderly

Public title

Comparing the diaphragmatic relaxation training and cognitive-behavioral therapy on sleep quality of the elderly

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Being over 60 years old Having an appropriate level of cognitive function (minimum score of 8 in the shortened cognitive test) Having the ability to read and write Complete mastery of Persian language Having the written consent to participate in the research Sleep disturbance based on getting a score higher than 5 in the Pittsburgh questionnaire

Exclusion criteria:

Not wanting to continue cooperation Deterioration of the patient's physical condition so that he is unable to cooperate Start taking sleeping pills Performing exercises and other interventions that affect the quality of sleep Foot of the patient

Age

From **60 years** old to **80 years** old

Target sample size: **75**

Randomization (investigator's opinion)

Randomized

Randomization description

After determining the framework of the samples, the data will be divided between 3 blocks A, B, C with the help of block randomization based on gender and age, in such a way that the first data in one of the 3 groups will be divided by a simple random method and using the software "Random allocation software" are selected and in the next 2 groups, the data is allocated in the same way based on the software. After equal allocation of data to 3 groups, treatment methods were written on 3 separate sheets and one method was assigned to each of the groups by lottery.

Intervention groups**1****Description**

Intervention group: Cognitive-behavioral therapy

intervention according to the instructions of Morin CM, Espie CA booklet for 4 weeks (2 sessions of 60 minutes per week) under the supervision of a qualified instructor (having work experience in psychological interventions with the elderly, including cognitive-behavioral therapy) A group is presented in the classroom to ensure the correct implementation of the work method. Meetings are performed with individual assignments (checklist for intervention at home) and the last 10 minutes of each session are spent reviewing reports related to these assignments and answering questions.

2

Description

Diaphragmatic breathing intervention group is invited to the faculty to practice a session in person and is practiced by the student (who has received the necessary permission to perform this intervention) through oral training, educational clips and pamphlets. After the end of the first session, the student will be evaluated one by one to ensure the correct implementation, and the implementation of the plan will be continued by them at home for 30 days and the student will be followed by a daily phone call to perform the procedure correctly and continuously. According to the LEE study, patients are advised to sit comfortably in a chair 30 minutes before bedtime, with one hand on the chest and the other on the abdomen with the knees bent and the shoulders relaxed. They are then asked to breathe slowly through their nose so that their abdomen moves up in front of their hands. The hand on the chest should be as stable as possible. During the exhalation phase, the patient should tighten the abdominal muscles and exhale slowly through the pursed lips. This exercise should be performed for 20 minutes every night before bed.
