Efficacy of Change Following a Resilience Intervention on Post-Traumatic Growth in Women with Addicted Spouses compared with control group

Protocol summary

Study aim

Determining the efficacy of Change Following a Resilience Intervention on Post-Traumatic Growth in Women with Addicted Spouses

Design

The clinical trial has a control group with parallel groups, random assignment to two groups of intervention and control on 40 people (20 people in each group). Simple randomization is used.

Settings and conduct

After obtaining a license from the ethics committee of the university of social welfare and rehabilitation sciences, a letter of introduction will be referred to the welfare organization of Qom city, and then the license to do research in the city will be received. According to the inclusion criteria, 40 individuals will be selected to participate in the study and will be randomly classified into the control and intervention groups.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Minimum education, At least one year has passed since the beginning of their married life, High perceived stress, Conscious consent to participate in research. Exclusion criteria: Using drugs, Existence of psychotic and suicidal symptoms, Receiving other simultaneous psychotherapy

Intervention groups

Type of intervention: Change Following a Resilience Intervention program for 1 month, in four weekly sessions, the intervention group is asked to work on transforming Stress Into Resilience, responsibility, focus on empowering interpretations and make meaningful connections. The control group don't get any treatment.

Groups that have been masked

- Participant

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization is simple . A code is assigned to each of the eligible persons and then the codes are selected randomly. The codes are placed in a lottery container. Finally, among them, numbers are selected and registered. The Lottery will be continued to reach certain numbers.

Blinding (investigator's opinion)
Single blinded

Blinding description
The participants in the intervention and control groups did not know which group they were in.

Placebo
