Iranian Registry of Clinical Trials

05 Jul 2026

Investigation of the effect of duloxetine on the mental state of patients with diabetic neuropathy (anxiety / depression)

Protocol summary

Study aim

Evaluation of efficacy and safety of duloxetine on mental status (anxiety / depression) of patients with diabetic neuropathy

Design

Clinical trial is performed on 30 patients by pre- and post-intervention method with one intervention group, non-corsaged, non-random, phase 2.

Settings and conduct

The study place is the office of supervisors and counselors (pain fellowship and endocrinologist), Specialist in the treatment of diabetic neuropathy and Evaluation of its effect and drug side effects on reducing depression and anxiety of patients for eligible patients (30 patients) prescribes duloxetine and He asks them to come back after 30 days of taking the medicine. The tool used to collect information is Beck Anxiety and Depression Inventory Which is completed by patients before and after the intervention. Also, side effects of the drug after the intervention and the amount of pain in patients are determined based on the VAS scale before and after the intervention.

Participants/Inclusion and exclusion criteria

Inclusion criteria: All diabetic patients aged 20 to 85 years with sensory diabetic neuropathy in the organs in which there are signs of anxiety or depression, referred to Dr. Rahmanian's office in 1401-1400. Exclusion criteria: non-cooperation of the patient in taking the drug, intolerance of the drug by the patient, pregnant women.

Intervention groups

We have only one intervention group That a specialist doctor to treat diabetic neuropathy and Investigating its effect on reducing depression and Anxiety of patients for them duloxetine in the form of 30 mg oral capsulesIt is prescribed twice a day (once every 12 hours) and should be consumed for up to 30 days.

Main outcome variables

Mental status (anxiety / depression) of patients based on

Beck questionnaire and drug side effects

Health conditions studied

1

Description of health condition studied

Effect of Duloxetine on the Mental State of Patients (Anxiety) with Diabetic Neuropathy

ICD-10 code

E08.43

ICD-10 code description

Diabetes mellitus due to underlying condition with diabetic autonomic (poly)neuropathy

2

Description of health condition studied

Effect of Duloxetine on the Mental State of Patients (Depression) with Diabetic Neuropathy

ICD-10 code

E08.43

ICD-10 code description

Diabetes mellitus due to underlying condition with diabetic autonomic (poly)neuropathy

Primary outcomes

1

Description

Determination mental state (anxiety / depression) of patients with diabetic neuropathy based on Beck questionnaire

Timepoint

Determining the score of anxiety and depression at the beginning of the study (before the intervention) and 30 days after taking duloxetine

Method of measurement

Beck Anxiety and Depression Inventory questionnaire

Secondary outcomes

1

Description

Intensity of pain Fingers or toes based on VAS scale

Timepoint

Determining the score of anxiety and depression at the beginning of the study (before the intervention) and 30 days after taking Duloxetine

Method of measurement

Visual Analogue Scale

2

Description

Frequency of adverse drug complications (Duloxetine)

Timepoint

30 days after taking Duloxetine

Method of measurement

Check list including possible adverse drug reactions following Duloxetine

Intervention groups

1

Description

Intervention group: A group treated with duloxetine in the form of 30 mg oral capsules, Twice a day (every 12 hours) for 30 days
