Iranian Registry of Clinical Trials

17 Sep 2026

The effect of quality of life therapy on hopefulness and health related quality of life in patients with major depressive disorder

Protocol summary

Study aim

Determining The effect of group quality of life therapy on hopefulness and health related quality of life in patients with major depressive disorder

Design

A clinical trial with control group, parallel groups, single-blinded, randomized, on 60 patients. The randomized block method and the online site (mentioned in the previous section) will be used for randomization.

Settings and conduct

The study will be performed at Shahid Rajaei Psychiatric Hospital in Yasuj. Quality of life and hopefulness questionnaires will be filled out by both groups before the intervention. Then, for the intervention group, ten sessions of psychotherapy based on quality of life, will be performed, but for the control group, no intervention will be performed. At the end of the intervention, the research questionnaires will be filled out again by the participants. In this single-blinded study, the evaluator is unaware of the groups.

Participants/Inclusion and exclusion criteria

Inclusion criteria; Having major depression diagnosed by a psychiatrist, Age over 18 years Exclusion criteria; Unwillingness or withdrawal from the company to continue the study.

Intervention groups

Intervention group: includes 30 patients for whom group psychotherapy based on quality of life will be held for 10 sessions a week for two sessions of one and a half hours. In these sessions, the characteristics of quality of life and its effect on living happily, teaching the CASIO model, respecting one's self, and the five branches of quality of life will be taught. Control group: includes 30 patients who will not receive any intervention during the study.

Main outcome variables

Quality of life - hopefulness

Scientific title

The effect of quality of life therapy on hopefulness and health related quality of life in patients with major depressive disorder

Public title

The effect of quality of life therapy on quality of life and hopefulness.

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

The patient has major depression diagnosed by a psychiatrist The patient is cognitively able to understand the content and therapeutic training Simultaneously earning a quality of life score below 50 and a hope score below 24 Age over 18 years Willingness and satisfaction to participate in research

Exclusion criteria:

Have severe chronic physical disorders (cancer, multiple sclerosis) Participate in similar therapeutic interventions in the last quarter

Age

From **18 years** old

Gender

Both

Phase

Groups that have been masked

- Outcome assessor

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

A total of 60 patients with major depression who meet the inclusion criteria will be selected and randomly assigned to the intervention and control groups through block randomization. For block randomization, according to the total number of 60 patients and the existence of two groups, blocks with sizes of 2, 4, and 6 will be used. For example, if the size of block is 2, we will have two modes AB and BA (A and B are intervention and control groups). In order to create random allocation sequences and concealment, online software with the following address will be used, and a unique randomization code will be generated. Sealed Envelope Ltd. 2021. Create a blocked randomization list. [Online] Available from: <https://www.sealedenvelope.com/simple-randomiser/v1/lists> [Accessed 5 Jun 2022].

Blinding (investigator's opinion)

Single blinded

Blinding description

In this study, the evaluator or the person who evaluates the questionnaires in the pre-test and post-test stages is not aware of the study groups.

Health conditions studied

1

Description of health condition studied

Major depressive disorder

ICD-10 code

F32.1

ICD-10 code description

Major depressive disorder, single episode, moderate

Primary outcomes

1

Description

Health related quality of life

Timepoint

Before the intervention - After the intervention

Method of measurement

The World Health Organization Health-related Quality of Life Questionnaire - Brief form. This is a 26-item questionnaire that measures a person's overall quality of life.

2

Description

Schneider hopefulness questionnaire. It has 12 questions and its purpose is to assess people's hopefulness.

Timepoint

Before the start of the study - after the intervention

Method of measurement

Schneider Hopefulness Questionnaire.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: includes 30 patients for whom group psychotherapy based on quality of life will be held for 10 sessions a week for two sessions of one and a half hours. In these sessions, the characteristics of quality of life and its effect on living happily, teaching the CASIO model, respecting one's self, and the five branches of quality of life will be taught.

Category

Treatment - Other

2

Description

Control group: includes 30 patients who will not receive any intervention during the study. According to ethical considerations, if the results of the interventions are positive in the intervention group, at the end of the research, and if the patients of control group have informed consent, the intervention will be performed on the control group.
