Comparing low level laser therapy and laser acupuncture effects on reducing pain in orthodontic patients

Protocol summary

Study aim

Evaluation of the effects of low-level laser therapy and laser acupuncture on reducing orthodontic pain

Design

This clinical trial has 2 intervention groups and 1 control group. The trial will be one-way blind, randomized, phase 2 and on 45 people. Patients will be randomly divided into one of three groups using triple blocks.

Settings and conduct

In this study, patients referred to private clinics of Birjand who are undergoing orthodontic treatment will be invited to participate in the trial. This study will be a single-blind randomized clinical trial in which patients will not be informed whether they are in the treatment or placebo group.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients who are treated for the first time using a fixed appliance; Had no systemic diseases; Had fully erupted permanent teeth; Had no chronic or neural pain. The exclusion criteria: Patients who are pregnant; patients who use systemic medications (analgesics, antibiotics, anti-inflammatory drugs, antidepressants, and bisphosphonates); patients with pathological conditions associated with teeth, gingiva, or periodontium.

Intervention groups

Intervention group 1 (low level laser therapy): A Simpler2 diode laser will be used for patients in this group.
Intervention group 2 (acupuncture laser therapy): A Wiser 3 diode laser will be used for patients in this group.
Control group: The laser device will be in the same position as the previous two groups, except that the device will be off.

Main outcome variables

Orthodontic treatment pain

Scientific title

Comparing low level laser therapy and laser acupuncture effects on reducing pain in orthodontic patients

Public title

Investigating the effect of laser in orthodontics

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients that are treated for the first time using a fixed orthodontic appliance. Having no systemic diseases. Having fully erupted permanent teeth. Having no chronic or neural pain.

Exclusion criteria:

Patients who are pregnant. Patients who use systemic medications (analgesics, antibiotics, anti-inflammatory drugs, antidepressants, and bisphosphonates). Patients with pathological conditions associated with teeth, gingiva, or periodontium.

Age

From **18 years** old to **40 years** old

Gender

- Participant

Sample size

Target sample size: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients with the above conditions were divided into three groups randomly and by blocking method (blocks of size 3) into one of three groups: intervention 1 and intervention 2 or control. Patients were divided into three groups: Simpler2 diode laser as group A, Wiser 3 laser diode as group B and control group as group C. First, various blocks of size 3 were created (ABC, ACB, BAC, BCA, CAB, CBA). One of these blocks was randomly selected and divided into one of three groups A, B or C according to the order mentioned in the patients' selected block. Then randomization was performed for other patients.

Blinding (investigator's opinion)

Single blinded

Blinding description

This study is single-blinded in which patients are unaware that they are receiving laser therapy or placebo. In both treatment groups and placebo, the laser is placed in the same way and with the same specifications in the desired points, and the light and sound of the laser beep are on for both groups, but the radiation is done only for the treatment group.

Pain, not elsewhere classified

Primary outcomes

1

Description

Pain score

Timepoint

Immediately, 6 hours, 12 hours, 1 day, 2 days, 3 days, 4 days and 5 days after orthodontic applique placement.

Method of measurement

Visual Analogue Scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: For patients in this group, a Simpler2 diode laser (Doctor Smile Simpler, made in Italy) with a wavelength of 980 nm with a biomodeling handpiece will be used with the following parameters: 1 watt output energy, 1 cm square cross-sectional area, continuous mode), Dose 150 joules per square centimeter, time 150 seconds in total. The laser diode will be in contact with the soft tissue.

Category

Treatment - Other

2**Description**

Intervention group 2: For patients in this group, a Wiser 3 diode laser (Doctor Smile, made in Italy) with a wavelength of 808 nm with a biomodeling handpiece with the following parameters will be used: 200 mW output energy, 0.28 cm cross-sectional area, continuous mode continuous), energy dose 21 joules per square centimeter, time 30 seconds at each point, 8 points (points sl18-st6-st7-li4 on both sides), total time 4 minutes. The diode laser will be used in contact with the tissue.

Category

Treatment - Other

3**Description**

Control group: For this group, the device is kept in the same position as the previous groups for patients, but no treatment is provided.

Category

Placebo
