The effect of Ghost oil on the treatment and relief of pain caused by diabetic neuropathy in a double-blind, parallel-controlled randomized clinical trial

Protocol summary

Study aim

Determining the effect of Ghost oil on the treatment and relief of pain caused by diabetic neuropathy

Design

Clinical trial with control group and with parallel groups, double-blind, randomized, phase 3, on 86 patients. To randomization the site <https://www.sealedenvelope.com> will be used.

Settings and conduct

The location of the study will be the personal office of an endocrinologist. 86 patients will be included in the study after being diagnosed with neuropathy with the main complaint of tingling and numbness and scoring 4 or higher on the neuropathy questionnaire by an endocrinologist and other inclusion criteria. Then they will be randomly assigned to two groups. The study is double-blind and neither the patients nor the evaluating doctor will know the type of treatment received.

Participants/Inclusion and exclusion criteria

Inclusion criteria: tingling in the area, pain in the distal region of the lower extremities, clinical diagnosis, type 2 diabetes, age over 18, chronic neuropathy; Exclusion criteria: limb pain due to other diseases, Drug-allergy, use of other drugs, addiction, use of anticoagulants, fractures, autoimmunity

Intervention groups

For one month, in the intervention group, Gabapentin 100 mg capsules will be used once a day and Ghost oil (made by Bo Ali Daru Company) will be used twice a day, in the morning before breakfast and at night before going to bed will be rubbed on the pain area and spine in a thin layer. The control group will be treated in the same way as the intervention group, only they will receive a placebo instead of the Ghost oil, which is completely similar to the Ghost oil.

Main outcome variables

pain score, quality of life

Scientific title

The effect of Ghost oil on the treatment and relief of pain caused by diabetic neuropathy in a double-blind, parallel-controlled randomized clinical trial

Public title

The effect of Ghost oil on the treatment and relief of pain caused by diabetic neuropathy

Purpose

Prevention

Inclusion/Exclusion criteria**Inclusion criteria:**

The main complaint of tingling Pain in the distal region of the lower limb for at least 3 months Clinical diagnosis of painful diabetic poly neuropathy plus a minimum score equal to or higher than 4 in the clinical evaluation of diabetic neuropathy (DN4 - Questionnaire) History of type 2 diabetes for at least 3 years Age over 18 years Chronic diabetic neuropathy

Exclusion criteria:

Lower limb pain caused by other diseases such as peripheral vascular disease and radiculopathy History of skin allergies to herbs Diabetic foot ulcers Taking other medications to treat diabetic neuropathy Drug addiction Taking anticoagulants Fractures and traumatic injuries lead to sensory and motor injuries in the lower extremities Autoimmune diseases (rheumatism and MS) History of hereditary neuropathies or underlying diseases that cause neuropathy such as chronic uremia lower limb amputation

Age

From **18 years** old

Gender

Both

Phase

3

Sample size

Target sample size: **86**

Randomization (investigator's opinion)

Randomized

Randomization description

Participants were assigned in to placebo or Ghost group using a permuted block randomization with block sizes of 4 and 6. The random sequence will be generated by a third person who had not any operational role in the study using a computer and the website <https://www.sealedenvelope.com>. In order to concealment, each patient will be assigned a unique code, and only the person who created the sequence will know which patient it belongs to.

Blinding (investigator's opinion)

Double blinded

Blinding description

The study has been double-blind, Neither the patients nor the person evaluating the patients will know the type of treatment. In order to perform blindness, the treatments and treatment methods are exactly the same in the two groups and placebo will be used in the control

group. The drugs of the two groups are in the form of oil and have the same color and are poured in the same containers and in the same shape. The codes are recorded on the drug labels, which are marked based on block randomization.
