The effect of lifestyle educational interventions on quality of life of patients undergoing hemodialysis

Protocol summary

Study aim

The effect of lifestyle education on the quality of life of dialysis patients

Design

Clinical trial with control group, double-blind, randomized by random number table on 60 patients

Settings and conduct

This study is a double-blind clinical trial that will be performed in the dialysis ward of Hojjat Koohkamari Hospital in Marand. After selecting the individuals according to the entry and exit criteria, random and blind allocation will be done in the intervention and test groups. The study is blind will be completed. Then, the members of the intervention group will receive lifestyle trainings twice a week for 6 sessions of 30 minutes in a face-to-face method with 6 questions. Then, both groups will be followed up for 12 weeks. After 12 weeks, the quality of life questionnaire for dialysis patients will be completed for both groups. It should be noted that the intervention will be performed by the researcher but, the completion of the questionnaires will be done by another person who will be blind to the intervention and control groups

Participants/Inclusion and exclusion criteria

Age 18 to 65 years History of dialysis for more than one year No mental illness Physical-motor disability

Intervention groups

Lifestyle training intervention that will be done in 6 sessions of 30 minutes face to face with questions and answers during dialysis.

Main outcome variables

Change in quality of life score Change in life style score

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

First, according to the medical record, from all patients, people who are eligible to enter the study will be selected. Then, according to the phone number listed in the patient's file, they will be contacted gradually to provide them with the necessary explanations about the study plan and confirm the desire of people to participate in the project. Contact people until completion. The number of samples will continue. After completing the number of samples, by simple randomization method by random number table, people will be placed in intervention or control groups.

Blinding (investigator's opinion)

Double blinded

Blinding description

After fully explaining the plan, how to do it and its purpose to the participants and obtaining informed consent will be randomly placed in the intervention and control groups. Also, data collection by a trained person who will be blind to the intervention and control groups Was to be accepted.

Intervention groups

1

Description

The intervention is in the form of exercises related to a healthy lifestyle for the intervention group, which will be done in 6 sessions of 30 minutes face to face with questions and answers in the patient's bed and during hemodialysis twice a week. The content of the sessions will be on topics such as diet, physical activity, a sense of responsibility for personal health, attention to spiritual growth and self-sufficiency, interpersonal relationships and stress management. The content of the meetings will be as follows. Session 1: Communicating between

people, the importance and necessity of a healthy lifestyle in everyday life Session 2: Lifestyle education and its components, review of factors affecting lifestyle and self-management education Session 3: Training on the effect of nutrition on health with the cooperation of a nutritionist, familiarity with the food pyramid, training on food calories and their impact on health and explaining meals and snacks Session 4: Review and training of exercises that affect health with the cooperation of a physical education expert and explain the importance of exercise in the prevention of various diseases and even in the treatment of some diseases Session 5: Familiarity with the role of sleep and adequate rest in health and the introduction of correct patterns of sleep hygiene, relaxation training, concentration and positive mental imagery to affect the improvement of disease Time management training, stress management Session 6: Summarizing and reviewing the contents. At the end of the sessions, individuals in both groups will be followed for 12 weeks to ensure the application of the training given by the intervention group and no specific changes in the lifestyle of the control group. Follow-up will be done in the form of a phone call.
