

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Comparative Effects of Graston Tool and Post Isometric Relaxation on Hamstring Tightness in Young Healthy Women

Protocol summary

Registration timing: **registered_while_recruiting**

Study aim

To compare the effects of graston tool and post isometric relaxation technique to improve the range of motion on hamstring tightness in young healthy individuals.

Last update: **2022-05-21, 1401/02/31**

Update count: **0**

Registration date

2022-05-21, 1401/02/31

Design

randomization will be through lottery method, single blinded study will be conducted in which only patient would be blinded.

Registrant information

Name

USWAH MUBEEN

Name of organization / entity

Settings and conduct

subjects with hamstring tightness will be taken from The University Of Faisalabad. subjects will be divided into two groups one group will receive graston technique and other group will receive post isometric relaxation technique.

Participants/Inclusion and exclusion criteria

people who have asymptomatic hamstring tightness .female and active knee extension test positive and people who will want to part of this study will be included this study. People who have acute and chronic hamstring injury. acute and chronic low back pain, having skin infections ,previous orthopedic surgeries and sciatica patients will be excluded.

Recruitment status

Recruitment complete

Funding source

Intervention groups

Group A and Group B will be given hot pack for 10 minutes as a baseline treatment. Group A will given graston tool and Group B will given post isometric relaxation technique. Both techniques will effective on hamstring tightness but which one will more effective technique.

Expected recruitment start date

2022-04-29, 1401/02/09

Expected recruitment end date

2022-05-30, 1401/03/09

Actual recruitment start date

empty

Actual recruitment end date

empty

Main outcome variables

Active knee extension test and straight leg raise test

Trial completion date

empty

General information

Public title

Comparative Effects of Graston Tool and Post Isometric

Relaxation on Hamstring Tightness in Young Healthy Women

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

people having age of 20 to 25 year people having asymptomatic hamstring tightness people having active knee extension test positive people wants to be part of study

Exclusion criteria:

people having acute and chronic low back pain people having acute and chronic hamstring injury students having skin infection people having previous orthopedic surgeries(surgeries of lower extremity within 6 month) sciatica patients

Age

From **20 years** old to **25 years** old

Gender

Female

Phase

- Participant

Sample size

Target sample size: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

randomization is done by lottery method. sealed envelop will made upon which allocation of participants in both groups can be possible without biasness.

Blinding (investigator's opinion)

Single blinded

Blinding description

participants of both groups will be unaware whether they are placed in which treatment group after the informed consent has been taken from them. participants of both groups will receive the same baseline treatment that will be the hot pack. After that different physiotherapy treatment of both groups of which participants will be unaware of.

Health conditions studied

1

Description of health condition studied

hamstring tightness

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

range of motion will be primary out come measure

Timepoint

range of motion will be measured before treatment and after 4 weeks after the completion of intervention.

Method of measurement

active knee extension test and SLR will be used to measure the range of motion.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: 1 graston technique will given to patient for 60 seconds. 3 sessions per week for 4 weeks will be given. Active knee extension test and straight leg raise test taken pre and post treatment

Category

Rehabilitation

2

Description

Intervention group: 2 Post Isometric Relaxation technique will given to patients and 3 repetitions will done 3 sessions per week for 4 weeks will be given. Active knee extension test and straight leg raise test taken pre and post treatment.
