

Clinical Trial Protocol

Iranian Registry of Clinical Trials

15 Jul 2026

Evaluation the effect of aspirin with and without rivaroxaban in lower extremity symptomatic peripheral artery disease in diabetic patient

Protocol summary

Study aim

Determining the effect of aspirin with and without rivaroxaban on symptomatic peripheral vascular disease of the lower extremities of diabetic patients

Design

The clinical trial without blinding; phase 3; randomized according to randomized numbers table with two groups of control (aspirin) and intervention (aspirin + rivaroxaban) on 60 patients, was used for randomization of rand function of Excel software.

Settings and conduct

This study is by randomized control trial and open label. This clinical trial will be performed after the approval of the research plan in the endocrinology clinic of Loghman hospital. Type 2 diabetic patients with symptomatic peripheral vascular disease of the lower extremities are selected.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Type 2 diabetic patients referred to Loghman Hospital endocrinology clinic (with FBS $\geq$ 126, two-hour glucose $>$ 180 and hemoglobin a1c $>$ 6.5%) with symptomatic peripheral vascular disease of the lower extremities (with lameness, lower extremity ulcers and nocturnal pain) Are selected. Exclusion criteria: : Patients taking Clopidogrel, revascularization treatment, joint disorder and hemoglobin a1c larger and equal to 7.5% are excluded from the study

Intervention groups

After selecting the patients and if they are satisfied to participate in the study, they are randomly divided into 2 groups of aspirin users with and without rivaroxaban.

Main outcome variables

Improvement of symptoms and ABI

Sample size

Target sample size: **60**

Actual sample size reached: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization will be done in a simple way for each patient using the website <https://www.randomizer.org>, which is obtained using random numbers extracted by the software, and the patients will be divided into 2 groups receiving A (Aspirin) and B (Aspirin + Rivaroxaban) are allocated. In other words, we extract random numbers according to the number of samples based on the introduced site, in such a way that even numbers are considered for intervention A and odd numbers are considered for intervention B. Patients are assigned to the corresponding group based on whether they received an odd or even number.

Blinding (investigator's opinion)

Not blinded

Health conditions studied**1****Description of health condition studied**

Type 2 diabetic patients with symptomatic peripheral vascular complications of the lower extremities

ICD-10 code

E11.51

ICD-10 code description

Type 2 diabetes mellitus with diabetic peripheral angiopathy without gangrene

Primary outcomes**1****Description**

Claudication

Timepoint

At the beginning of the study and 1 and 3 months after taking aspirin with and without rivaroxaban

Method of measurement

Claudication= Fanton criterion and question from the patient

2**Description**

Nocturnal pain

Timepoint

At the beginning of the study and 1 and 3 months after taking aspirin with and without rivaroxaban

Method of measurement

Question from the patient

3**Description**

Wound healing

Timepoint

At the beginning of the study and 1 and 3 months after taking aspirin with and without rivaroxaban

Method of measurement

Observation of the facilitator

4

Description

ABI

Timepoint

At the beginning of the study and 1 and 3 months after taking aspirin with and without rivaroxaban

Method of measurement

Ultrasound

Secondary outcomes

Intervention groups

1

Description

Intervention group: This group includes 30 patients with type 2 diabetes who have peripheral vascular disease of the lower extremities. Patients in this group will receive aspirin (80 mg daily) and rivaroxaban (5.2 mg every 12 hours).

Category

Treatment - Drugs

2

Description

Control group: This group includes 30 patients with type 2 diabetes who have peripheral vascular disease of the lower extremities. Patients in this group will receive only aspirin (80 mg daily).
