

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

Effects of Plyometric versus Resistance training on speed, agility and power among Football players

Protocol summary

Registration timing: **prospective**

Study aim

to compare the effects of plyometric training and resistance training on the speed, agility, and power among football players.

Last update: **2022-05-21, 1401/02/31**

Update count: **0**

Registration date

2022-05-21, 1401/02/31

Design

Randomized Controlled Trial, Parallel Group, Single Blind

Settings and conduct

The study will be conducted in Pakistan sports Board (PSB), Lahore Pakistan. Football players visiting PSB will be consented to participate in the study. The study will be single blind and the outcome assessor will be blinded by not knowing the details of the study groups. The Investigator will determine the information by the medical record number, assigned to each participant.

Recruitment status

Recruitment complete

Funding source

Participants/Inclusion and exclusion criteria

inclusion criteria: any player who plays regularly in football clubs 3-4 days a week. player with age of between 16 to 35 years of age. male football players. volunteer to participate exclusion criteria: players which have any injury during prior to study. players with any type of Pain or musculoskeletal injury at time of test. players with any contraindication to participating in sports. players participating on other training sessions

Expected recruitment start date

2022-06-01, 1401/03/11

Expected recruitment end date

2022-12-01, 1401/09/10

Sample size

Target sample size: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

Zelen's 1993 method of open label technique will used. the participants would be addressed about the technique and they will chose the treatment. the participants would be enrolled in the study till both groups reach the saturation/ no. of sample size achieved. in this way the natural randomization will take place and the outcome investigator will be blind.

Blinding (investigator's opinion)

Single blinded

Blinding description

36 Participants will be involved in my study using Purposive Sampling Technique. 2 groups of 18 participants each will be made and will be randomized using systematic sampling. Outcome assessor will be blinded by not knowing the information about the groups of the study. The Investigator will determine the information by the medical record number, assigned to each participant.

Health conditions studied

1

Description of health condition studied

speed, agility, and power among football players.

ICD-10 code

R26.89

ICD-10 code description

Other abnormalities of gait and mobility

Primary outcomes

1

Description

improvement in agility of football players

Timepoint

Before intervention and 6 weeks after intervention

Method of measurement

Agility T test

Secondary outcomes

1

Description

improvement in speed of football players

Timepoint

Before intervention and 6 weeks after intervention

Method of measurement

30 meter Dash test (for Speed)

Intervention groups

1

Description

Intervention group: will receive a plyometric training program for 3 sessions a week and train for 12 weeks. After the every 4 weeks the tests will again done and data will be collected. Plyometric training consist of jumping and squats, single leg hope both, double leg bounding, split jump, tuck jump, box jump, and depth jump.

Category

Rehabilitation

2

Description

Control group: will receive a plyometric training program for 3 sessions for a week and train for 12 weeks. After the every 4 weeks the tests will again done and data will be collected. Resistant training program consist of squats, leg press, heel raise, lunges and legs.
