Evaluation of the Impact of educational program on sexual function and marital satisfaction in menopause women

Protocol summary

Summary

This study evaluate the effect of educational program on sexual function and marital satisfaction in postmenopausal women referred to health centers affiliated to Tehran University of Medical Sciences. One hundred postmenopausal women aged 45 to 55 are living with a stable partner, have no sexual dysfunction, and severe depression are randomly placed in two intervention and control groups. The intervention group receive Four two-hour sessions for the weekly group training and will receive a training manual and the control group receive routine care centers. Then, two months after intervention, in intervention group and two month after filing the initial questionnaires in control group, the sexual function and marital satisfaction of women is evaluated and the results are compared with each other.
