

Clinical Trial Protocol

Iranian Registry of Clinical Trials

19 Jun 2026

comparison of the effectiveness of treadmill training alone versus treadmill training with external clues in improving gait and functional ability in parkinson's patient

Protocol summary

Study aim

the aim of the study is to check the effectiveness of the treadmill training alone versus treadmill training with external clues in improving gait and functional ability in parkinson patient

Design

Randomized control trial

Settings and conduct

this trial will be conducted at Physicaltherapy and rehabilitation ward of Chauhary akram teaching hospital (Teaching hospital associated with Azra Naheed Medical College ,The superior University ,Lahore)

Participants/Inclusion and exclusion criteria

Inclusion Criteria: (1) Age 50 to 65 years (2) Male and female both (3) idiopathic Parkinson's disease (4) disease severity of II to V on the Hoehn and Yahr Scale and with minimum assistance and support required (5) ability to stand independently and to walk on a treadmill (with body weight support, if required) (6) sufficient visual capacity to see the cues Exclusion Criteria: (1) Patient with Parkinson disease wheel-chair bond and bed-ridden (2) any other neurologic or orthopedic disorder affecting gait and postural stability; (3) change in medication for the treatment of Parkinson's disease during the study period (4) cognitive impairment (5) severe cardiovascular disorders (6) vestibular dysfunctions

Intervention groups

Interventions: Group 1 (Control group) Group 1 in training session will receive the treadmill training session over 30 minutes. Patients in 1 receive the same treatment protocol in 5 days per week and the this treatment protocol must be continue for 6 weeks. Group 2 (Experimental Group): Group 2 in training session received the treadmill training session over 30 minutes along with the external clues like visual, auditory,etc.In 5 days per week and this treatment protocol must be

continuing for 6 weeks

Main outcome variables

Gait it will be assessed by usiing wisconsin gait scale and Functional ability will be assessed by Motor Aspects of Experiences of Daily Living (M-EDL)

Scientific title
comparison of the effectiveness of treadmill training alone versus treadmill training with external clues in improving gait and functional ability in parkinson's patient

Public title
effect of treadmill training alone versus treadmill training with external clues in treatment of parkinson's

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Age 50 to 65 years Male and female both idiopathic Parkinson's disease disease severity of II to V on the Hoehn and Yahr Scale and with minimum assistance and support required ability to stand independently and to walk on a treadmill (with body weight support, if required) sufficient visual capacity to see the cues

Exclusion criteria:

Patient with Parkinson disease wheel-chair bond and bed-ridden any other neurologic or orthopedic disorder affecting gait and postural stability; change in medication for the treatment of Parkinson's disease during the study period cognitive impairment severe cardiovascular disorders vestibular dysfunctions

Age
From **50 years** old to **65 years** old

Gender
Both

Phase
1

Groups that have been masked

- Outcome assessor

Sample size
Target sample size: **72**
Actual sample size reached: **72**

Randomization (investigator's opinion)
Randomized

Randomization description
participants fullfilling the inclusion and exclusion criteria will be allocated randomology into control group and experimental group.the process of allocation will be concealed from participants and the researcher.

Blinding (investigator's opinion)
Single blinded

Blinding description
in our study we used a blinding protocol in which the outcome assessor is fully blind he didnot have the idea about the intervention being provided to the participants, the this process which mostly used in clinical trials in which the participants, investigators and/or assessors remain ignorant concerning the treatments which

participants are receiving.
Placebo
Not used
Assignment
Parallel
Other design features

Secondary Ids
empty

Health conditions studied

1

Description of health condition studied

Parkinson's disease is a brain disorder that causes unintended or uncontrollable movements, such as shaking, stiffness, and difficulty with balance and coordination. Symptoms usually begin gradually and worsen over time. As the disease progresses, people may have difficulty walking and talking

ICD-10 code

G00-G99

ICD-10 code description

<https://icd10monitor.com/icd-10-coding-of-parkinson-s-disease-code-carefully/#:~:text=ICD%2D10%2DCM%20Coding%3A,%2C%E2%80%9D%20code%20G20%20is%20listed.>

Primary outcomes

1

Description

Gait: Gait is the rhythmical movement of the limb and trunks which help in the forward movement of the central of gravity and it help in the shifting of the weight forward. Gait Cycle: Step Length,,Stride length: Stance phase.Swing phase: mid swing Acceleration,deacceleration.Stance phase divided into 5 major sub-division like:Initial contact: rFoot flat: Mid stance: tHeel off: Toe off:

Timepoint

after 6 weeks

Method of measurement

wisconsin gait scale for gait measurement and Functional ability will be assessed by Motor Aspects of Experiences of Daily Living (M-EDL)

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Patients in both treatments will complete training sessions over 6 weeks (5 sessions per week) and the patient will assess at base line and then it will assess after 6 weeks respectively. During the first session, all patients will be trained for 20 minutes at their own pace. All patients will complete at least 30 training sessions over 45 minutes at the last session. Group 1 (Control group) Group 1 in training session will receive the treadmill training session over 30 minutes. Patients in 1 receive the same treatment protocol in 5 days per week and the this treatment protocol must be continue for 8 weeks. Group 2 (Experimental Group): Group 2 in training session received the treadmill training session over 30 minutes along with the external clues like visual, auditory, etc. In 5 days per week and this treatment protocol must be continuing for 8 weeks.
