

Clinical Trial Protocol

Iranian Registry of Clinical Trials

06 Jun 2026

effectiveness of flossing technique in addition to routine physical therapy on pain and range of motion in patients with patellofemoral pain syndrome: A randomized controlled trial

Protocol summary

Study aim

To determine the effectiveness of flossing techniques on pain and range of motion in patients with patellofemoral pain syndrome

Design

It will be a two arm parallel Randomized trial with outcome assessor being blinded

Settings and conduct

Data will be collected from outpatient department of REX clinic Lahore

Participants/Inclusion and exclusion criteria

Inclusion Criteria: (1)Patients with age 14-40 will be included (2)Diagnosed patients with patellofemoral pain syndrome having three months history of pain (3) patients with positive clinical patellar test Exclusion Criteria: Patients with history of knee Osteoarthritis, fracture of knee joint, malignancy will not be included in the trial

Intervention groups

Group A will receive Routine physical therapy which involves standing hamstring stretch, quadriceps stretch, side lying leg lift, Quads sets, straight leg raise, step up, wall squats and stabilization exercises Group B will receive flossing exercises along with routine physical therapy. Floss band which is stretchable will be used for this purpose.

Main outcome variables

Pain, functional disability and range of motion

Scientific title

effectiveness of flossing technique in addition to routine physical therapy on pain and range of motion in patients with patellofemoral pain syndrome: A randomized controlled trial

Public title

Effects of flossing techniques along with routine

exercises on pain and range of motion of knee in patients with patellofemoral pain syndrome: A randomized controlled trial

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Diagnosed patients with patellofemoral pain syndrome having three months history of pain Patients having positive clinical patellar test will be included

Exclusion criteria:

Patients with Osteoarthritis of knee joint, patellar tendinopathy will not be included Patients with Osgood Schlatter disease Those with recent history of fracture of knee joint will not be included in the trial Those who will have had history of malignancy will not be taken into account

Age

From **14 years** old to **40 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Care provider
- Outcome assessor

Sample size

Target sample size: **60**

More than 1 sample in each individual

Number of samples in each individual: **3**

Data will be taken at baseline, 2nd and 6th week post intervention

Randomization (investigator's opinion)

Randomized

Randomization description

Total 60 participants will be randomly allocated into two groups using computer generated randomization method in which computer software will be utilized to randomly allocate participants in either group A or Group B. Then it will be concealed in an envelope and participant will be given concealed envelopes. Convenient random sampling technique will be used

Blinding (investigator's opinion)

Double blinded

Blinding description

It will be Double blinded study as assessor and caregiver will be unaware of the treatment given to patient. Treatment will be carried out in the treatment room with only patient and physiotherapist present and assessor and caregivers will not be given any information on which technique they applied to the participant. In this way they will be blinded.

Health conditions studied

1

Description of health condition studied

Patellofemoral pain syndrome

ICD-10 code

M22.2X9

ICD-10 code description

Patellofemoral disorders, unspecified knee

Primary outcomes

1

Description

Pain

Timepoint

Primary outcome will be measured at baseline, 3rd and 6th week post intervention

Method of measurement

Pain will be assessed using Visual Analog Scale

2

Description

Functional disability

Timepoint

It will be assessed at Baseline, 3rd and 6th week post intervention

Method of measurement

It will be measured using Lower Extremity Functional Index

3

Description

Range of motion

Timepoint

Range of motion will be assessed at Baseline, 3rd and 6th week post intervention

Method of measurement

Range of motion will be measured using Goniometer

Secondary outcomes

empty

Intervention groups

1

Description

Control group: will receive Routine physical therapy. In routine physical therapy stabilization exercises of knee along with other exercises will be performed which includes quads sets exercises, side lying leg lift, straight leg raise, step up, wall squats.

Category

Treatment - Other

2

Description

Intervention group: will receive flossing exercises along with the routine physical therapy. Floss band will be used for this purpose.

Title and more details about the data/document

Effects of flossing techniques along with the routine physical therapy on pain and range of motion in patients with patellofemoral pain syndrome: A randomized controlled trial All collected deidentified IPD will be shared

When the data will become available and for how long

Data will become available after 15 December 2022 for a period of 3 years

To whom data/document is available

People working in academics or who are involved in clinical trials or to students for research purposes

Under which criteria data/document could be used

Data can be used for research purpose only

From where data/document is obtainable

Data can be obtained by sending an email

What processes are involved for a request to access data/document

Data can be obtained by sending an email to dr.nusratqamar55@gmail.com
