Evaluation of the effect of Pentoxifylin in treatment of diabetic foot ulcers

Protocol summary

Summary

In a Double-Blind RCT for evaluation of Pentoxifylin effect on Diabetic foot ulcer, 22 patients with foot ulcers (grade 1 & 2 Wagner classification) were enrolled into two groups. Intervention group received Pentoxifylin 400 mg/day and control group received placebo. Patients were followed for 3 months and compared in terms of rate of healing, side effects and need to debridement or amputation. Patients were excluded from the study if amputation or debridement needed. Patients were also identical in terms of blood sugar and nutritional state (HbA1C one unit upper than upper limit, Alb more than 3.5). Patients who had peripheral vascular disease, history of consumption of drugs that may influence wound healing or coagulation system, contraindications for Pentoxifylin (Ischemic heart diseases, Retinal hemorrhage, and Cerebral hemorrhage) were excluded.

Scientific title

Evaluation of the effect of Pentoxifylin in treatment of diabetic foot ulcers

Public title

Evaluation of the effect of Pentoxifylin in treatment of diabetic foot ulcers

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion Criteria: Presence of NIDDM (Non insulin dependent diabetes mellitus), presence of foot ulcer, HbA1C one unit more than normal range. Exclusion Criteria: Serum Alb<3.5 mg/dL, presence of peripheral vascular disease, non-palpable Dorsalis pedis & Tibialis posterior pulses, consumption of Glucocorticoids and Warfarin, contraindication for Pentoxifylin.

Age

No age limit

Gender

Both

Health conditions studied

1

Description of health condition studied

Diabetic foot ulcer

ICD-10 code

E11.5

ICD-10 code description

Non-insulin-dependent diabetes mellitus With peripheral circulatory complications

Primary outcomes

1

Description

Healing of diabetic foot ulcer

Timepoint

Baseline, every one month for 3 months

Method of measurement

Decrease of the wound size relative to original size:
length in Linear wounds (mm), surface in planar wounds

(mm²), volume in 3 dimensional wounds (mm³)

Secondary outcomes

1

Description

Drug adverse effects

Timepoint

3 months

Method of measurement

Clinical manifestations of Dizziness or Retinal hemorrhage

2

Description

Need to debridement

Timepoint

3 Months

Method of measurement

proportion of patients who need debridement

3

Description

Need to amputation

Timepoint

3 months

Method of measurement

proportion of patients who need amputation

Intervention groups

1

Description

Pentoxifyline (Oral capsule, 400 mg, BID for 3 months)

Category

Treatment - Drugs

2

Description

Flour filled capsules as placebo(Oral capsule like Pentoxifylin, BID for 3 months)

Category

Treatment - Drugs
