The effect of an educational program on childbearing intention in women referring to comprehensive health centers

Protocol summary

Study aim

Determining the effect of an educational program on childbearing intention in women referring to comprehensive health centers in Koohdasht city in the condition of Covid pandemic 19

Design

Clinical trial with a control group, randomized, phase 2 on 80 women referred to comprehensive health centers. Numbered cards were used for randomization.

Settings and conduct

According to the conditions of covid-19, first the test group will be divided into four groups of 10 people and the intervention program will be taught during 3 sessions while observing social distancing in a large educational space in the health center of Kohdasht city. The first session included discussions related to the importance and benefits of having children and its relationship with the mother's age and explanations about the covid-19 pandemic, the second session included discussions such as healthy lifestyles and the consequences and problems of single children, and the third session included discussions such as training and pregnancy care.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1. Age between 18 and 45 years. 2. No known mental disorders as well as other physical disorders 3. Not currently pregnant. Exclusion criteria: 1. Reluctance to continue cooperation in research. 2. Having more than two sessions of absence during the training course. 3. Get pregnant during training sessions.

Intervention groups

Intervention group: The intervention program will be taught to the women of the intervention group in 3 sessions. Control group: do not receive any training.

Main outcome variables

Individuals' scores on the Attitude to Fertility and Childbearing Scale psychometered by Baezat et al.

Randomization (investigator's opinion)

Randomized

Randomization description

Samples will be randomly divided into two groups of 40 test and control. In this way, 40 cards with number one and 40 cards with number two will be placed in a sealed envelope and on the day of random division of research units, they will be asked to choose one card. People who are assigned number one will be in the test group and people who will be assigned the number 2 will be in the control group.
