Effects of preoperative Respiratory Muscle Training for improvement of postoperative Health Related Quality of Life in Mitral Valve Replacement patients”

Protocol summary

Study aim

To evaluate comparative effectiveness of preoperative Respiratory Muscle Training versus conventional treatment for improvement of postoperative Health Related Quality of Life in Mitral Valve Repair/Replacement patients.

Design

Single Blinded Quasi Experimental Clinical Design

Settings and conduct

Faisalabad Institute of Cardiology, Faisalabad, Punjab, Pakistan. This setting is used to conduct the research. Participants will be allocated in groups to fulfil the inclusion criteria and those who are in exclusion criteria will be excluded. Participants will be assessed on the basis of HHQ-GP-1 as a screening tool. Participants will be assessed on basis of EuroQol-5-D-5L and NYHA classification system. Trials will be performed and results will be noted at baseline, 3rd week and postoperative before discharge.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Both male and female patients will be included. Age 25-50 years. Patients who are awaiting mitral valve repair/replacement. Exclusion Criteria: Patients with any other significant valvar or coronary artery diseases necessitating surgical intervention. Patients who have chronic respiratory conditions. Patients who have neurological deficits. Patients who are morbid obese according to Body Mass Index. Patients who reveal inconsistency with exercise protocol. Patients with chronic renal insufficiency.

Intervention groups

Treatment will be provided for 2 times, 10-15 repetitions, five days and three weeks to both groups. Respiratory Muscle Training group will perform segmental breathing, huff-coughing breathing and incentive spirometer breathing exercises and Conventional Muscle Training will perform deep breathing and diaphragmatic breathing

exercises with pursing of lips.

Main outcome variables

Health Related Quality Of Life Euro-Qol 5D-5L, New York Heart Association Classification (NYHA).

Health conditions studied

1

Description of health condition studied

Mitral valve Replacement is used to treat the diseased mitral valve.

ICD-10 code

02RG38Z

ICD-10 code description

Mitral valve Replacement

Primary outcomes

1

Description

The EuroQol-5 D-5L (EQ-5D-5L), is a most widely used generic tool to measure the health-related quality of life (HRQoL) and considered suitable for patients with pulmonary problems.

Timepoint

3time points including Baseline, After 3rd week, and postoperatively before discharge.

Method of measurement

EuroQol-5D-5L will be measured by EuroQol-5D-5L Questionnaire

Secondary outcomes

1

Description

The New York Heart Association classification is a straight forward system use for determining heart failure. It divides patients into four Classes: Class I can complete any activity requiring ≤ 7 Metabolic Equivalent, Class II can complete any activity requiring ≤ 5 Metabolic Equivalent, Class III can complete any activity requiring ≤ 2 Metabolic Equivalent ,Class IV cannot do or cannot complete any activity requiring at least less than ≥ 2

Metabolic Equivalent ,depending upon their limits during physical activity; these limitations/symptoms include normal breathing, varying degrees of shortness of breath and angina discomfort

Timepoint

3 time points including Baseline, After 3rd week, and postoperatively before discharge

Method of measurement

NYHA Classification (Newyork Heart Association Classification) will be measured by NYHA grading system

2

Description

Postoperative Duration of Mechanical Ventilation (hours) use was defined from the time the patient entered the ICU to the moment of extubation

Timepoint

1 time postoperatively

Method of measurement

Postoperative Duration of Mechanical Ventilation will be measured in hours from patient entered the ICU to the moment of extubation

3

Description

Postoperative Hospital Stay (Days) is the lenght of days patient stay in hospital after surgery

Timepoint

1 time postoperatively

Method of measurement

Postoperative Hospital Stay (Days) will be measured from patient stay in hospital after surgery

Intervention groups

1

Description

Intervention group 1;Respiratory muscle training consisting of Segmental Breathing Exercise, huff-coughing techniques and instructions of flow-IS-based Incentive Spirometer, 10-15 repetitions for five days and three weeks.

Category

Rehabilitation

2

Description

Control group: ,Breathing exercises consisting of 10 deep breathing attempts, diaphragmatic breathing and pursing of the lip, 10-15 repetitions for five days and three weeks.

Category

Rehabilitation
