

Clinical Trial Protocol

Iranian Registry of Clinical Trials

19 Jul 2026

An investigation of the effectiveness of remote intervention monitoring signals to prevent the recurrence of disease in individuals with severe psychiatric disorders

Protocol summary

Study aim

Investigate the effectiveness of remote intervention monitoring signals to prevent the recurrence of disease in individuals with severe psychiatric disorders

Design

A clinical trial with the control group. with parallel groups of simple randomization on 52 patients. A sealed envelope is used for randomization.

Settings and conduct

Men and women departments of Sina Junghan Psychiatric Hospital. Education of warning signs of relapse and weekly telephone follow-up after discharge for the patient and his caregiver in the experimental group

Participants/Inclusion and exclusion criteria

Entry requirements: Definitive diagnosis of severe psychiatric disorder by a psychiatrist Conscious consent of the patient's legal guardian or primary caregiver for participation in the research The patient should be between 20 and 45 years old The absence of mental retardation and epilepsy Having minimum literacy by the patient and the guardian Living in the same house with the guardian or the primary caregivers The patient should not be a candidate for maintenance in long-term rehabilitation centers Non-entry conditions: The patient or caregiver should declare their unwillingness to continue cooperation during the research. The psychiatric patient and caregiver do not respond to the researcher's calls for three consecutive weeks.

Intervention groups

The basis of this study is teaching the warning signs of disease recurrence in severe psychiatric patients to them and their caregivers during hospitalization and the weekly contact of the researcher with them after discharge and completing the patient and family checklist. This study is divided into two experimental and control groups, In the control group people were not trained and followed up after the weekly discharge.

Main outcome variables

Relapse prevention; adherence to treatment; Regular medication use

Scientific title

An investigation of the effectiveness of remote intervention monitoring signals to prevent the recurrence of disease in individuals with severe psychiatric disorders

Public title

An investigation of the effectiveness of remote intervention monitoring signals to prevent the recurrence of disease in individuals with severe psychiatric disorders

Purpose

Prevention

Inclusion/Exclusion criteria**Inclusion criteria:**

Definitive diagnosis of severe psychiatric disorder by a psychiatrist, based on the criteria of the fifth diagnostic and statistical manual of mental diseases (DSM5), and its inclusion in the patient's medical record conscious consent of the patient's legal guardian for them and the patient's participation in the research conscious consent of the main caregiver of the patient in cases where the primary caregiver of the patient is someone other than their legal guardian The psychiatric patient should be between 20 and 45 years old The absence of mental retardation and epilepsy based on the opinion of the psychiatrist and the contents of the patient's medical record Having at least reading and writing literacy by the person with psychiatric disease and guardian Living in the same house with the guardian or primary caregivers (family members of the patient) participating in this research The patient should not be a candidate for maintenance in long-term rehabilitation centers

Exclusion criteria:

The patient or caregiver should declare their unwillingness to continue cooperation during the research. The psychiatric patient and caregiver do not respond to the researcher's calls for three consecutive weeks.

Randomization (investigator's opinion)

Randomized

Randomization description

Sampling will be done in an accessible and consecutive way over time. At the beginning of the study, patients of the experimental and the control groups equalize in terms of variables such as the type and duration of the disease. The method of selecting intervention and control group patients will be random. In this way, as the number of patients, envelopes containing a number are

considered. Once the patient is selected to enter the study, the number inside one of the random envelopes indicates the patient group. An even number means the patient is in the intervention group and an odd number means the patient is in the control group. In this way, the researcher does not know beforehand which group the patient will fall into.

Intervention groups

1

Description

Intervention group: 26 patients with severe psychiatric disorders admitted to Sina Psychiatric Hospital of Joneghan who meet the criteria for entering the study. These people and their caregivers, after obtaining conscious consent from the guardian and the main caregiver and informed consent from the patient, are trained on the warning signs of relapse. After discharge, we contact the patient and their caregiver weekly, and the checklist of the patient and the family is completed regarding the status of warning signs and how to take the medicine and adhere to the treatment.

Prevention

2

Description

Control group: 26 patients with severe psychiatric disorders admitted to Sina Psychiatric Hospital of Joneghan who meet the criteria for entering the study. These people and their caregivers are placed in the control group after obtaining conscious consent from their main guardian and caregiver and informed consent from the person himself after randomization of the sealed envelope, and they are not trained, and there is no follow-up after weekly discharge.

Title and more details about the data/document

After the end of the research, the data related to the main outcome and the data related to the conscious consent of the patients and their family and the checklists will be published in the form of a master's thesis in social work.

When the data will become available and for how long

The access period is from January of 2023.

To whom data/document is available

Researchers working in university and scientific institutions and psychiatric hospitals

Under which criteria data/document could be used

Study and use in researches

From where data/document is obtainable

Scientific research officer

What processes are involved for a request to access data/document

The request email should be sent to the scientific officer
