Comparison of the effect of tai chi exercise and walking on HbA1C levels health related quality of life in patient with type 2 diabetes

Protocol summary

Study aim

Determining and comparing the effect of tai chi exercise and walking on HbA1C levels health related quality of life in patient with type 2 diabetes

Design

Clinical trial with control group, with parallel, randomized groups, 96 patients

Settings and conduct

Approval of the research plan in the university ethics committee. At the beginning of the study, completion of the checklist of demographic characteristics, Diabetes Quality of Life-Brief Clinical Inventory and analysis of HbA1C level with HPLC model DS5. Intervention in both tai chi and walking groups, 60 minutes and for 12 weeks. 12 weeks after the start of the study, re-completion of the Diabetes Quality of Life-Brief Clinical Inventory and analysis of HbA1C level with HPLC model DS5. The training place is a gym.

Participants/Inclusion and exclusion criteria

Admission requirements: 1- Willingness to participate in the study 2- Age 20-60 years. Conditions of non-entry: 1- Diabetic foot ulcer 2- Lack of regular participation in exercises

Intervention groups

Intervention group 1: tai chi exercise: This exercise is performed for 12 weeks (1 to 2 hours after eating). Subjects will participate in two 60-minute Tai Chi training sessions per week for 12 weeks. Each session will include 10 minutes of warm-up, 40 minutes of tai chi and 10 minutes of cooling down. Intervention group 2: walking: This exercise is performed for 12 weeks (1 to 2 hours after eating). Each session will include 10 minutes of warm-up and 10 minutes of cool-down. Control group: Non-intervention: This training group will not be given.

Main outcome variables

Hemoglobin A1C and Health related quality of life

Scientific title

Comparison of the effect of tai chi exercise and walking on HbA1C levels health related quality of life in patient with type 2 diabetes

Public title

Comparison of the effect of tai chi exercise and walking on HbA1C levels health related quality of life in patient with type 2 diabetes

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Having type 2 diabetes with the approval of a specialist doctor Treated with oral diabetes medications Willingness to participate in the study Awareness of your illness being alert Not suffering from mental retardation and not suffering from mental illness Age 20-60 years Obtaining an average and unfavorable quality of life score related to health based on a questionnaire

Exclusion criteria:

Hospitalization during the study Creating emergency conditions such as non-ketonic hyperosmolar or hypoglycemia Patients with decreased visual activity due to diabetic retinopathy and decreased body movement due to diabetic foot disease Unwillingness to continue cooperation Migration Exercise intolerance Diabetic foot ulcer Suffering from musculoskeletal or cardiovascular diseases Lack of regular participation in exercises Diabetic patients with hemoglobinopathy or anemia Diabetic patients with uremia Diabetic patients with microvascular complications such as retinopathy, nephropathy and neuropathy

Age

From **20 years** old to **60 years** old

Sample size

Target sample size: **96**

Randomization (investigator's opinion)

Randomized

Randomization description

Random allocation by block method will be in order for the researcher to make sure that exactly the same number of patients will enter the intervention and control groups in a consecutive, but equal, time interval. The groups will be formed as B, A and C. Before assigning people to one of the groups, a list of these letters (B, A, and C), in other words, blocks of sizes 3, 9, and 12, will be created by the reliable website <https://www.sealedenvelope.com>. Each of the referring and qualified people will be assigned to one of the groups.

Blinding (investigator's opinion)

Intervention groups

1

Description

Intervention group 1: tai chi exercise: This exercise is performed for 12 weeks (1 to 2 hours after eating). Subjects will participate in two 60-minute Tai Chi training sessions per week for 12 weeks. Each session will include 10 minutes of warm-up, 40 minutes of tai chi and 10 minutes of cooling down. warm up includes; Exercise major joints and muscle groups at a low intensity level to prepare the skeletal muscles, heart and lungs for a gradual increase in exercise intensity following the recommendation of the American Diabetes Association. During each session, in addition to gentle, coordinated and smooth movements of different body parts, relaxation and deep breathing will be emphasized during the exercise. A tai chi workout will be followed by a cool-down workout that is structured like a warm-up to gradually lower the heart rate to pre-exercise levels. Because tai chi involves significant footwork, participants are advised to take precautions to prevent blisters and keep feet dry to minimize foot injury, as recommended by the American Diabetes Association. Recommends. Participants will also be reminded to drink enough water before, during and after exercise, as dehydration can negatively affect blood glucose levels and heart function. To prevent dehydration due to the heat caused by the activity, the gym will have air conditioning. Also, precautions such as eating a snack before exercise will be taken to prevent hypoglycemia caused by exercise. Participants will be advised to notice and report symptoms such as hunger, nervousness, tremors, or sweating. Glucose tablets, juice, soft drinks will be provided to increase blood glucose if needed. In addition, brochures and educational CDs will be given.
