Iranian Registry of Clinical Trials

10 Jul 2026

Evaluation of Cognitive Strategic Based Interventions on Nursing Students' Stigmatizing Attitudes toward Patients with Mental Disorders

Protocol summary

Study aim

1-Determining and comparing the mean score of the stigmatizing attitudes of nursing students in two intervention and control groups before and after the implementation of interventions based on cognitive strategies. 2-Determining and comparing the mean score of nursing students' stigmatizing attitudes between two intervention and control groups before and after the implementation of interventions based on cognitive strategies.

Design

The clinical trial has two intervention and control groups with parallel, randomized groups

Settings and conduct

Nursing students of the Faculty of Nursing and Midwifery, Faculty of Nursing, Urmia University of Medical Sciences in the academic year 1400-1401, samples are randomly selected and meetings are held.

Participants/Inclusion and exclusion criteria

inclusion criteria: Consent to participate in the research - Not participating in the previous similar research - Studying in the field of nursing in the first and second semesters in the academic year of 1401. Exclusion criteria: absence in at least one third of the training sessions

Intervention groups

In the intervention group, intervention in person and online, according to the conditions of the intervention time and in the form of interventions based on cognitive strategies for 10 sessions and twice a week for the samples of the intervention group (3 groups of 10 people), along with 3 sessions of supplementary discussions With 3 rounds of pre-test measurement, it will be immediately after and 3 months later. In the control group, 3 times of measurement are done without a training class.

Main outcome variables

Stigmatic attitude

Sample size

Target sample size: 60

Randomization (investigator's opinion)

Randomized

Randomization description

For randomization in this study, an independent researcher made random allocation cards using computer generated the random numbers. The allocator kept the original random allocation sequences in an inaccessible third place and worked with a copy. Instead of the letters A and B, she used the codes E and C (E for experimental group and C for control group) to avoid further confusion. Then, she continued to randomize until the intervention and control group samples were completed.

Blinding (investigator's opinion)

Not blinded

Intervention groups

1

Description

Intervention group: The intervention program will be implemented face-to-face and online, according to the conditions of the intervention time and in the form of interventions based on cognitive strategies for 10 sessions and twice a week for the samples of the intervention group (3 groups of 10 people) by the researcher. These sessions are not limited to education, at the end of each session there will be discussion and exchange of opinions between the students. In sessions 7 to 9, the intervention group in the psychiatry department of Razi Hospital will meet and have direct contact with hospitalized patients, and in this regard, additional discussions will be held with the intervention group at the end of these 3 sessions. will have. The pre-test and post-test will be done immediately (and three months after the end of the intervention) using the mental illness stigma scale AQ27 in both the intervention and control groups.
