Comparing the Effectiveness of Face-To-Face and Non-Face-To-Face Training on Oral and Dental Health Behaviors Based On the Health Belief Model in Patients with Type 2 Diabetes Referring To Comprehensive Rural Health Service Centers, Andimeshk, Iran

Protocol summary

Study aim

Comparing the Effectiveness of Face-To-Face and Non-Face-To-Face Training on Oral and Dental Health Behaviors Based On the Health Belief Model in Patients with Type 2 Diabetes Referring To Comprehensive Rural Health Service Centers

Design

One hundred twenty patients with type 2 diabetes were selected based on the inclusion criteria and then were randomly divided into two face-to-face (60 patients) and non-face-to-face (60 patients) training groups. For the face-to-face training group, training programs will be through lectures with questions and answers, group discussions, and videos in three 60-minute sessions; and for the non-face-to-face training group through the presentation of patient education pamphlets.

Settings and conduct

comprehensive rural health service centers in Andimeshk

Participants/Inclusion and exclusion criteria

The inclusion criteria were confirming the diagnosis of type 2 diabetes, having literacy, having age 30-65 years, enjoying physical and mobility ability, not having artificial teeth, not suffering from severe mental illnesses and exclusion criteria consisted of having no consent to participate in the study and being absent in more than two intervention sessions.

Intervention groups

face-to-face training group: It included lecture methods with questions and answers, group discussion, playing training clips, and using training aids (such as slides and video projectors) in three 60-minute sessions

Main outcome variables

Increasing awareness Performing preventive behaviors against oral and dental diseases
