The effect of counseling on childbirth satisfaction in primiparous women based on Fordyce's happiness model

Protocol summary

Study aim

The effect of counseling on childbirth satisfaction in primiparous women based on Fordyce's happiness model in mothers referring to Zanjan health centers in 1401

Design

clinical trial with a control group, randomized, sample size= 80 people

Settings and conduct

Sampling will be done in Zanjan comprehensive health centers. 4 centers for the intervention group and 4 centers for the control group were selected by lottery. in the selected centers, Pregnant women, who meet the inclusion criteria, will be selected by simple random method. From the 29th week of pregnancy, the intervention group will receive group counseling based on Fordyce's happiness model. there is no blinding.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age range from 18 to 42; Obtaining a score lower than 12.5 in the Edinburgh depression questionnaire; Absence of serious underlying disease; A healthy fetus without abnormalities and a singleton
Exclusion criteria: People who do not want to continue participating in the study; People who do not participate in more than one counseling session; the occurrence of stressful events; Elective and emergency cesarean sections

Intervention groups

From the 29th week of pregnancy, the intervention group will receive Fordyce's happiness group counseling in 6 sessions virtually (twice a week) and consecutively for 60-90 minutes using the WhatsApp application and sending clips and pictures in groups of 8 people. did At the same time, the control group will also receive routine prenatal care. In order to comply with ethics, after completing the study, all the educational videos prepared by me will be available to the control group

Main outcome variables

The level of satisfaction with childbirth; the level of happiness

Age	From 18 years old to 42 years old	Ethics committees	
Gender	Female	1	
Phase	N/A	Ethics committee	
Groups that have been masked	No information	Name of ethics committee	کمیته اخلاق دانشگاه علوم پزشکی زنجان
Sample size	Target sample size: 80	Street address	No. 3539, Badr 9 Ave, Zanjan city
Randomization (investigator's opinion)	Randomized	City	زنجان
Randomization description	Sampling will be done by multi-stage random allocation. In the first stage, each urban area is considered as a cluster. There are a total of 22 comprehensive health centers and bases in Zanjan city, which are located in 4 urban areas. Then, from each cluster, two comprehensive health centers (one intervention center, one control center) will be selected by a simple random method through lottery. Based on this, we will have 8 comprehensive health centers, 4 centers for the intervention group and 4 centers for the group. will be controlled. In this way, the names of both centers are written on two separate sheets and placed in the lottery bag, then the first paper removed will be assigned to the intervention group and the remaining paper to the control group. In the next stage, in the selected centers, eligible pregnant women will be selected by a simple random method, and mothers who are in the twenty-ninth week of pregnancy and are willing to participate in the study and meet the inclusion criteria will be included in the study.
