Effect of FIFA 11+ Kids program on kinematic risk factors for ACL in preadolescent girl soccer players during single leg landing

Protocol summary

Study aim

ACL injury prevention in preadolescent girl soccer players is study's main purpose.

Design

A number of 40 young healthy female football players will be invited to the laboratory of the Faculty of Physical Education of Bu Ali Sina University in Hamedan. and will be divided into two control and experimental groups with parallel groups. To conceal the random sequence, the method of opaque envelopes with random sequences will be used. And all the measured factors will be done in two phases before training program and after the training program for both groups.

Settings and conduct

The place of conducting the tests is the laboratory of Bu Ali Sina University in Hamedan. To conceal the random sequence, the method of closed envelopes with random sequences will be used. And only the data evaluator will be blinded

Participants/Inclusion and exclusion criteria

Only preadolescent females in the range of 10-13 years old will recruit for the study.

Intervention groups

The intervention group performs 11+ kids program for 8 weeks and 2 sessions per week. The control group performs warm-up routine program.

Main outcome variables

knee flexion, abduction and internal rotation hip flexion, adduction and internal rotation trunk flexion, lateral flexion and rotation

Scientific title

Effect of FIFA 11+ Kids program on kinematic risk factors for ACL in preadolescent girl soccer players during single leg landing

Public title

11+ Kids exercises on risk factors for ACL

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

All of the players involved in football at least 6 months
All of the players should be 10-13 years old
Exclusion criteria:
Neuromuscular disorders Participation in other sports
injury prevention program at past 6 months

Age

From **10 years** old to **13 years** old

Gender

Female

Phase

2

Groups that have been masked

- Outcome assessor

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Randomized

Randomization description

To create a simple random sequence, randomization under web such as graphpad.com and for concealment, allocation concealment will be used.

Blinding (investigator's opinion)

Single blinded

Blinding description

For concealment, the method of opaque envelopes with random sequences will be used. Each of the random sequences is recorded on a card and the cards are placed in the envelopes in order. In order to maintain the random sequence, the outer surface of the envelopes is numbered in the same order. At the time of starting the registration of the participants, one of the envelopes will be opened based on the order of their arrival and the allocated group of that participant will be revealed.

Health conditions studied

1

Description of health condition studied

Healthy preadolescent girl soccer players

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Knee angles in sagittal, frontal, and horizontal planes

Timepoint

Pretest and posttest after 8 weeks

Method of measurement

Motion analyze system

2

Description

Hip angles in sagittal , frontal and horizontal planes

Timepoint

Before and after 8 weeks

Method of measurement

Motion capture analysis system

3

Description

Trunk angles in sagittal, frontal and horizontal planes

Timepoint

Before and after 8 weeks

Method of measurement

Motion capture analysis system

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: 11+ kids training performs for 8 weeks and 2 sessions per week. it includes balance, strength, and jumping training. and there are seven difficulty levels for each exercise

Category

Prevention

2

Description

Control group: Warm up routine program performs for 8

weeks and 2 sessions per week. this includes running, stretching and agility training.
