Effects of Preoperative Aerobic training for Improving Postoperative Functional Mobility in Coronary Artery Bypass Graft Patients

Protocol summary

Study aim

To evaluate effects of preoperative aerobic training for improving postoperative functional mobility in coronary artery bypass graft patients.

Design

Non Blinded non randomized Quasi experimental design.

Settings and conduct

Faisalabad Institute of Cardiology Faisalabad. After complete evaluation, informed consent will be taken from patients who include in the study. Sample size of 38 patients will be allocated in two groups with one receive aerobic training and other group will receive conventional treatment. the outcomes measure will be evaluating at baseline, 3rd week preoperative and postoperative before discharge.

Participants/Inclusion and exclusion criteria

Inclusion criteria:40-60 years of age. patients with double and triple Coronary artery bypass graft. patients with left ventricular ejection fraction > 50%. Exclusion criteria: patients with congestive heart failure. patients with pacemaker dependents. patients with neurological deficit.

Intervention groups

Treatment will be provided for 4 days in a week for 3 weeks for both groups. Group 1 will perform the Aerobic exercises.Group 2 will perform the breathing exercises.

Main outcome variables

Time Up and Go Test, Canadian Cardiovascular Society Grading, Duration of Oxygen Therapy

Scientific title

Effects of Preoperative Aerobic training for Improving Postoperative Functional Mobility in Coronary Artery Bypass Graft Patients

Public title

Effects of Aerobic training for Improving Functional Mobility in Coronary Artery Bypass Graft Patients

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Age 40-60 years Patients awaiting coronary artery bypass graft patients with stable angina Patients with double and triple coronary artery disease Patients with left ventricular ejection fraction >50% Patients who have diabetes Patients who are smokers Patients who have hypertension

Exclusion criteria:

Patients with congestive heart failure Patients having dysrhythmias and pacemaker dependent Patients with neurological deficit(stroke, epilepsy, Alzheimer disease) Patients with renal dysfunction require dialysis Concomitant valve disease Patients with pulmonary complications

Age

From **40 years** old to **60 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **38**

More than 1 sample in each individual

Number of samples in each individual: **19**

Patients will be non randomly assigned into two groups. Each group will comprise of 19 patients

Randomization (investigator's opinion)

Not randomized

Ethics committee reference number**Health conditions studied****1****Description of health condition studied**

Coronary artery bypass graft is a surgical operation in which blocked arteries are partially or completely bypass using grafts taken from other arteries or veins. a therapeutic procedure used to treat coronary artery disease.

ICD-10 code

T82.2

ICD-10 code description

Mechanical complication of coronary artery bypass graft and biological heart valve graft

Primary outcomes**1****Description**

Time up and go test was used to measure the functional mobility of the patients. record the readings in seconds in time up and go test.

Timepoint

3 time-points including Baseline, 3rd week preoperative, postoperative before discharge

Method of measurement

Time up and go test will be utilized to access functional mobility

Secondary outcomes**1****Description**

Canadian cardiovascular society grading is a grading scale used to grade the angina of patients. There are 4 grade of it. Grade 1 mean ordinary physical activity does not cause angina. Grade 2 mean slight limitation of ordinary physical activity. Grade 3 mean marked limitation of ordinary physical activity. Grade 4 mean inability to carry on any physical activity.

Timepoint

3 time-points including Baseline, 3rd week preoperative, postoperative before discharge

Method of measurement

CCS will be used to grading the angina of patients.

Intervention groups**1****Description**

Aerobic training group. Warm up activity include range of motion exercises of upper and lower limb (8-12 repetitions) one set in a day. Aerobic exercises in the form of walking on flat surface in corridor, light to moderate pace(10-15 min).Stepping (8-12 repetitions)

once a day , 4 days in a week for 3 weeks.Cool down activity include static stretching(20-60 sec hold) exercise of upper and lower limb one set in a day. As in conventional group treatment.

Category

Rehabilitation

2

Description

Conventional group. Early mobilization(bed mobility, transfer) according to the protocol. Deep breathing exercises include Diaphragmatic and Pulse lip breathing.In this exercise breath in deeply and slowly through your nose, expanding your lower rib cage and letting your abdomen move forward,hold for a count 3-5. Breath out slowly and completely through your pulsed lips, once a day, 4 days in a week for 3 weeks. Huff and cough technique once a day, 4 days in a week for 3 weeks.
