The effect of online respiratory and corrective exercises on posture, physical ability, respiratory function, and quality of life in the elderly with thoracic hyper-kyphosis

Protocol summary

Study aim

In this study we sought to evaluate the effectiveness of 6 weeks of online corrective exercises on posture, disability, respiratory function, and quality of life in the elderly with thoracic hyperkyphosis

Design

A clinical trial with the control group, With parallel groups, single-blinded, randomized

Settings and conduct

34 elderly adults with thoracic hyperkyphosis will recruit and randomly assign to two control and experimental groups. All measurements will perform in the biomechanics laboratory of the faculty of physical education at Allame Tabataba'i University.

Participants/Inclusion and exclusion criteria

Adults aged ≥ 60 with TK angle more than 40° , without participation in any regular exercise routines were included in this study. The exclusion criteria were the history of any neuromuscular diseases, presence of back pain, osteoarthritis, falls while walking, cancers and chemotherapy, long-term use of corticosteroids medication,

Intervention groups

The experimental group will undergo the corrective exercises protocols with online supervision for 6 weeks (3 sessions per week \times 60 minutes), which will be augmented with breathing practices. Exercises will be used as part of the intervention to address issues with spinal extensor muscle weakness, inadequate recruitment and activation of the muscles, limited spinal mobility, and improper postural alignment. The control group will be asked to perform 10 minutes of general warm-up exercises and general stretching exercises followed by 40 minutes of self-selected walking speed.

Main outcome variables

Quality of life (SF 36) Postural measurements (Kyphosis angle, forward head posture angle, shoulder angle)

Disability Index (Barthel Index) Breathing pattern

Scientific title
The effect of online respiratory and corrective exercises on posture, physical ability, respiratory function, and quality of life in the elderly with thoracic hyper-kyphosis

Public title
The effect of online rcorrective exercises in the elderly with thoracic hyper-kyphosis: A clinical trial study

Purpose
Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

Adults aged ≥ 60 Thoracic kyphosis angle more than 40°
Without participation in any regular exercise routines

Exclusion criteria:

History of any neuromuscular diseases Presence of back pain History of osteoarthritis History of falls while walking History of cancers and chemotherapy History of long-term use of corticosteroids medication Age more than 75 years

Age
From **60 years** old to **75 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **34**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization will be done as simple method with card. The type of intervention will be put in sealed envelopes. Individuals are listed in order of attendance. After including in the study, the envelopes will be shuffled and each person is asked to select an envelope. The subjects will be asked to select one envelope. According to the predicted sample size, the number of envelopes will be provided. Therefore, any selected envelope will not return to randomization sequence. This type of randomization can result to have the same number of individuals in both groups.

Blinding (investigator's opinion)
Not blinded

Blinding description
Placebo
