Evaluation of the efficacy of using the pelvic floor muscle training application in comparison with physiotherapy in patients with urinary incontinence

Protocol summary

Study aim

Determining the efficiency of using the pelvic floor muscle strengthening training application compared to physiotherapy in patients with urinary incontinence.

Design

70 patients will be placed in two groups of physiotherapy or application with parallel groups, single blinded and randomized by random allocation software.

Settings and conduct

After obtaining written informed consent from the participants, and at the Al-Zahra Hospital in Isfahan, two ICIQ- SF and ICIQ-L were administered in both groups before the intervention and 3 months later. It will be completed during an interview from the beginning of the treatment. In the physiotherapy group, 20-15 physiotherapy sessions will be prescribed. which they will undergo in khorshid physiotherapy center. In the application group, the necessary Kegel exercises are given to the patients. After completing the follow-up period of all patients, the obtained information will be analyzed.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age 18-70 years; Female gender; Persistence of urinary incontinence symptoms at least once a week ; Stress incontinence or Mixed; BMI=20-30; POP grade 1 or 2; - The exclusion criteria are: Pregnancy; Difficulty passing urine; Macroscopic hematuria; Patients whose urinary symptoms were diagnosed in the POP grade 3 or 4.

Intervention groups

Patients included in this study are divided into two groups intervention group use the application designed to perform the exercises and Patients in the control group will be treated with pelvic floor muscle physiotherapy for 15-20 sessions.

Main outcome variables

Study group: Urinary frequency score (before and after

treatment); Urine leakage score (before and after treatment); The impact score of urinary leakage on the quality of life (before and after treatment); Quality of life score (before and after treatment).

Scientific title
Evaluation of the efficacy of using the pelvic floor muscle training application in comparison with physiotherapy in patients with urinary incontinence

Public title
Evaluation of the efficacy of using the pelvic floor muscle training application in comparison with physiotherapy

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Age : 18-70 y/o Female Urinary incontinence for at least once a week Diagnosed stress or mixed incontinence Vaginal prolapse grade 1 or 2 BMI=20-30

Exclusion criteria:
Difficulty urinating Pregnancy Macroscopic hematuria Urinary symptoms related to grade 3 or 4 of POP

Age
From **18 years** old to **70 years** old

Gender
Female

Phase
N/A

Groups that have been masked

- Investigator
- Outcome assessor
- Data analyser

Sample size
Target sample size: **70**

Randomization (investigator's opinion)
Randomized

Randomization description
first the participants are grouped by degree of urinary incontinence in three groups, then the patient's names are sorted by the alphabetic order, and each of them assigned a number. Patients are randomly assigned to control and intervention groups by random allocation software in individual units. Block randomization will be used with a block size of 6.

Blinding (investigator's opinion)
Single blinded

Blinding description
n this study, the patients and the clinical caregiver providing physiotherapy services and the person who teaches the use of the app are aware of which group they belong to. However, the researcher and the analyst do not know about the division of the patients.

Health conditions studied

1

Description of health condition studied

stress or mixed urinary incontinence

ICD-10 code

N39.3

ICD-10 code description

Stress incontinence (female) (male)

Primary outcomes

1

Description

The score obtained in the International Consultation on Incontinence Questionnaire Lower Urinary Tract Symptoms Quality of Life

Timepoint

The beginning of the study (before the start of the intervention) and three months after its start

Method of measurement

The ICIQ-LUTS-qol questionnaire

2

Description

The score obtained in the International Consultation on Incontinence Questionnaire - Short Form

Timepoint

The beginning of the study (before the start of the intervention) and three months after its start

Method of measurement

International Consultation on Incontinence Questionnaire - Short Form questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

intervention group: our designed application is used to train the intervention group with kegel exercises for three months and 30 minutes each day.

Category

Rehabilitation

2

Description

Control group: these patients are prescribed 10-15 physiotherapy sessions for pelvic floor muscle training
