Evaluation and comparison of surgical results of pelvic fractures of APC type II and III by anterior pelvic plating method with anterior pelvic plating method and SI screw implantation in patients admitted to Ayatollah Kashani and Al-Zahra hospitals in Isfahan city

Protocol summary

Study aim

Evaluation and comparison of surgical results of pelvic fractures of APC type II and III by anterior pelvic plating method with anterior pelvic plating method and SI screw implantation

Design

This is a quasi-experimental study with two parallel groups, non-randomized, open-label.

Settings and conduct

This study is conducted in Ayatollah Kashani and Al-Zahra hospitals in Isfahan city. Patients with unstable pelvic fractures were included in the study based on the inclusion criteria and obtaining informed consent and will be treated non-randomly (based on clinical criteria and the specialist's decision) with one of the two usual methods. Finally, the process of response to treatment 2 weeks and 6 months after the operation will be compared by examining the amount of bone union.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Confirming informed consent, Age 18 to 80 years, unstable pelvic fracture. Exclusion criteria: Patients with the acetabulum, pubic ramus, and sacrum fracture.

Intervention groups

Intervention group 1: Patients who are candidates for elective surgery due to unstable pelvic fracture, in this group, undergo anterior pelvic plating surgery.
Intervention group 2: Patients who are candidates for elective surgery due to unstable pelvic fracture, in this group, undergo anterior pelvic plating surgery and SI screw implantation.

Scientific title
Evaluation and comparison of surgical results of pelvic fractures of APC type II and III by anterior pelvic plating method with anterior pelvic plating method and SI screw implantation in patients admitted to Ayatollah Kashani and Al-Zahra hospitals in Isfahan city

Public title
Evaluation and comparison of anterior pelvic ring fixation

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Confirming informed consent Age 18 to 80 years
Unstable pelvic fracture
Exclusion criteria:
Patients with a fracture of the acetabulum, pubic ramus, and sacrum

Age
From **18 years** old to **80 years** old

Gender
Both

Phase
2-3

Groups that have been masked
No information

Sample size
Target sample size: **30**

Randomization (investigator's opinion)
Not randomized
