Effects of blood flow restriction training and routine physical therapy on clinical outcomes in patients with lateral epicondylitis

Protocol summary

The study outcome variables are pain, range of motion, functional disability and quality of life.

Study aim

This study aims to compare the effects of blood flow restriction training and routine physical therapy on clinical and functional outcomes in patients with lateral epicondylitis.

Design

Parallel groups randomized clinical trial with blinded outcome assessment

Settings and conduct

This clinical trial is conducted at Wasim General & Orthopaedic Hospital Gojra. The patients in control group have received routine physical therapy treatment including application of TENS, moist heat pad and stretching exercises (06 reps with 10 secs hold) and strengthening exercises (10 reps with 10 secs of resistance application). The patients in experimental group have received blood flow restriction resistance training in addition to routine physical therapy treatment. In this training, limb occlusion pressure (LOP) is measured of affected upper limb. BP cuff is applied at deltoid level to restrict the blood flow at 30% LOP and then patient is asked to perform resistance exercises in 04 sets with 30 reps in 1st set and 15 reps in other 03 sets. Each participant (of both group) has 03 session per week for 06 weeks. Only data assessor is blinded.

Participants/Inclusion and exclusion criteria

Patients of both genders having diagnosed unilateral tennis elbow in 20-50 years of age are included in the study. Patients who received steroid injections for tennis elbow in last 06 months, patients having cardiovascular diseases, bleeding disorders, peripheral diseases, hypertension, hypotension, tumor, trauma, systematic or skin diseases are excluded from the study.

Intervention groups

There are two intervention groups. The control group is receiving routine physical therapy treatment alone and experimental group is receiving blood flow restriction training along with routine physical therapy treatment.

Scientific title

Effects of blood flow restriction training and routine physical therapy on clinical outcomes in patients with lateral epicondylitis

Public title

Blood Flow Restriction Training Treatment in Tennis Elbow

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients diagnosed with unilateral tennis elbow 20-50 years of age among both genders

Exclusion criteria:

Patients who received steroid injections for tennis elbow in last 06 months Cardiovascular diseases Bleeding disorders and peripheral vascular diseases History of hypertension or hypotension Tumor Trauma Systematic diseases Skin diseases

Age

From **20 years** old to **50 years** old

Gender

Both

Phase

2

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **72**

Actual sample size reached: **72**

Randomization (investigator's opinion)

Randomized

Randomization description

Concealed envelopes were used for the randomization of the participants into intervention and control groups

Blinding (investigator's opinion)

Single blinded

Blinding description

The assessor and data analyzer are blinded by labelling the experimental and control groups with unidentifying symbols

Placebo

Description of health condition studied

The Lateral Epicondylitis (Tennis Elbow)

ICD-10 code

M77.1

ICD-10 code description

Tennis Elbow, Lateral Epicondylitis, Blood Flow Restriction Training Treatment

Primary outcomes

1

Description

Pain

Timepoint

At the baseline, at the end of 3rd week, at the end of 6th week

Method of measurement

Visual Analogue Pain Scale

2

Description

Ranges of Motion (including wrist flexion, wrist extension, supination, pronation and elbow flexion)

Timepoint

At baseline, at the end of 3rd week and at the end of 6th week

Method of measurement

Goniometer

3

Description

Functional Disability

Timepoint

At the baseline, at the end of 3rd week and at the end of 6th week

Method of measurement

4

Description

Quality of Life

Timepoint

At the baseline, at the end of 3rd week and at the end of 6th week

Method of measurement

36- Item Short Form Survey (SF-36)
