Clinical Trial Protocol
Iranian Registry of Clinical Trials

04 Jul 2026

Evaluation of the effect of vitamin E on prevention of acute kidney injuray and Fanconi syndrome caused by iron chelators in thalassemia patients

Protocol summary

Study aim

Determining the frequency of Acute Kidney Injury in the intervention group Determining the frequency of Acute Kidney Injury in the control group Determining the frequency of Fanconi syndrome in the intervention group Determining the frequency of Fanconi syndrome in control group patients Comparison of renal function in the intervention group with the control group

Design

A clinical trial with intervention and control groups, unblinded, randomized, phase 3 on 50 patients. The rand function of Excel software was used for randomization.

Settings and conduct

All patients with thalassemia major who Amirkabir Hospital covers are included in the study after signing the informed consent. Then we randomly divided 50 patients into 2 intervention and control groups. The intervention group, in addition to the standard treatment, use iron chelator (nanojade), and vitamin e with a dose of 400 milliunits, and the control group only the standard treatment. 48 hours and 7 days after the beginning of the study, cr, and gfr will be checked in the blood test at the thalassemia department of Amirkabir Hospital, and 30 days after the beginning of the study, VBG, BUN/Cr, U/A, FBS, and serum P will be checked in the blood test And the urine is checked. After collecting information, 2 groups are compared and the effect of vitamin E is checked.

Participants/Inclusion and exclusion criteria

Inclusion criteria: All patients with thalassemia covered by Amir Kabir Hospital Non-entry criteria: Those who do not cooperate to enter the study

Intervention groups

Intervention group: patients with thalassemia who receive vitamin E and iron chelators. Control group: patients with thalassemia who do not receive vitamin E but receive iron chelators.

Main outcome variables

creatinine level; glomerular filtration rate; phosphorus level; urine glucose level; venous blood gas level; ratio of blood urea nitrogen to creatinine

Scientific title
Evaluation of the effect of vitamin E on prevention of acute kidney injuray and Fanconi syndrome caused by iron chelators in thalassemia patients

Public title
"Effect of vitamin E in preventing kidney problems in thalassemia patients"

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
All patients with thalassemia are covered by Amir Kabir Arak Hospital
Exclusion criteria:
All patients who are covered by Amirkabir Hospital but do not consent to participate in the study.

Age
No age limit

Gender
Both

Phase
3

Groups that have been masked
No information

Sample size
Target sample size: **50**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization method: simple randomization Each patient in the desired community has an equal chance of being selected Randomization Unit: Individual Randomization tools: Excel Microsoft

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment
Parallel

Other design features
In the intervention group, people receive vitamin E daily for one month, and in the control group, they receive the standard treatment before entering the study.

Secondary Ids

Health conditions studied

1

Description of health condition studied
Thalassemia

ICD-10 code
D56.1

ICD-10 code description
Beta thalassemia

2

Description of health condition studied
Acute Kidney Injury

ICD-10 code
N17.0

ICD-10 code description
Acute kidney failure with tubular necrosis

3

Description of health condition studied
Fanconi syndrome

ICD-10 code
E72.0

ICD-10 code description
Disorders of amino-acid transport

4

Description of health condition studied
Abnormal Kidney function

ICD-10 code
R94.4

ICD-10 code description
Abnormal results of kidney function studies

Primary outcomes

1

Description
Creatinine level

Timepoint
It will be checked on the first day of the study and 48 hours and 7 days after the start of the study

Method of measurement
blood samples

2

Description
glomerular filtration rate
Timepoint
It will be checked on the first day of the study and 48 hours and 7 days after the start of the study
Method of measurement
blood sample

3

Description
Blood phosphorus level
Timepoint
It is checked on the first day of the study and 30 days after the start of the study
Method of measurement
blood sample

4

Description
Urine glucose level
Timepoint
It is checked on the first day of the study and 30 days after the start of the study
Method of measurement
urine sample

5

Description
Venous blood gas level
Timepoint
It is checked on the first day of the study and 30 days after the start of the study
Method of measurement
blood sample

6

Description
The ratio of blood urea nitrogen to creatinine
Timepoint
It is checked on the first day of the study and 30 days after the start of the study
Method of measurement
blood sample

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: In addition to the standard treatment, this group receives a daily iron chelator called Jedneo 360 mg tablet with the generic name Defrasirox of Swiss company NOVARTIS, and vitamin E with a dose of 400 mg of E-Vigel 400mg Softgel of Iran's Dana Pharmaceutical Company. Deferasirox It leads to an increase in the excretion of iron through feces. Deferasirox is prescribed in cases where the amount of iron in the body is chronically accumulated due to blood transfusion or diseases such as thalassemia to eliminate excess iron.
Category
Treatment - Drugs

2

Description
Control group: This standard treatment group receives a daily intake of an iron chelator called Jadenio 360 mg tablet with the generic name Deferasirox by Novartis Switzerland. Deferasirox leads to an increase in the excretion of iron through feces. Deferasirox is prescribed in cases where the amount of iron in the body is chronically accumulated due to blood transfusions or diseases such as thalassemia to eliminate excess iron.
Category
Treatment - Drugs
