Clinical Trial Protocol
Iranian Registry of Clinical Trials

04 Dec 2023

Evaluation of the effects of curcumin-piperine in reducing Pseudomonas infection and improving clinical outcome in patients with cystic fibrosis

Protocol summary

Study aim

Determining effect of curcumin-piperine drug on Pseudomonas infection and clinical symptoms of cystic fibrosis patients

Design

A clinical trial with a control group, with parallel groups, double-blind, randomized,

Settings and conduct

Study population is the patients referred to the cystic fibrosis clinic in Akbar Children's Hospital. Patients are divided into case and control groups. Curcumin-piperine is given to case group and placebo with the usual treatments is given to control group . The duration of the treatment period will be 3 months. The results will be checked at the beginning and end of the treatment.

Participants/Inclusion and exclusion criteria

Entry conditions: Cystic fibrosis patients who have been diagnosed based on clinical symptoms and sweat test, 5 years and above, Have pulmonary and gastrointestinal problems, able to perform the spirometry maneuver and have at least FEV1≥ 30% based on normal population based on age, gender,height, Percentage of oxygen saturation based on pulse oximetry be≥90% at room temperature,be clinically stable, Informed consent has been obtained from the patients,Do not have heart,liver,kidney failure, Do not have celiac disease, No evidence of acute pulmonary exacerbation that requiring hospitalization in last4 weeks, Do not have evidence of severe complications of pulmonary disease including severe hemoptysis or pneumothorax during last 2 months

Intervention groups

Intervention group: the intervention group are cystic fibrosis patients with pseudomonas infection who are treated with curcumin-piperine in addition to the usual treatments for cystic fibrosis.control group are patients with cystic fibrosis who are treated with placebo in addition to the usual treatments of cystic fibrosis.

Main outcome variables

Clinical symptoms of patients,Pulmonary symptoms,Pseudomonas pulmonary infection,Weight,Height,Body mass index,Patients' quality of life

Scientific title
Evaluation of the effects of curcumin-piperine in reducing Pseudomonas infection and improving clinical outcome in patients with cystic fibrosis

Public title
Evaluation of the effects of curcumin-piperine in reducing Pseudomonas infection and improving clinical outcome in patients with cystic fibrosis
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Cystic fibrosis patients who have been diagnosed based on clinical symptoms and sweat test. 5 years and above. Have pulmonary and gastrointestinal problems. able to perform the spirometry maneuver and have at least FEV1 greater than or equal to 30% based on the normal population based on age, gender and height. The percentage of oxygen saturation based on pulse oximetry should be greater than or equal to 90% at room temperature. be clinically stable. Informed consent has been obtained from the patients. Do not have heart, liver or kidney failure. Do not have celiac disease. No evidence of acute pulmonary exacerbation that requiring hospitalization in last past 4 weeks. Do not have evidence of severe complications of pulmonary disease including severe hemoptysis or pneumothorax during the last 2 months.
Exclusion criteria:
Age
From **5 years** old
Gender
Both

Phase
3
Groups that have been masked

- Participant
- Outcome assessor

Sample size
Target sample size: **138**
Randomization (investigator's opinion)
Randomized
Randomization description
The samples will be determined by random block method with blocks of 4 and using random numbers table of SAS software. Blocking and allocation sequence for concealment will be done by a person not involved in the research. The allocation ratio of the samples will be (Allocation 1:1) and will be placed in two groups (Assignment). Then, based on the obtained blocks and according to the allocation sequence, the drugs will be given to the patients.
Blinding (investigator's opinion)
Double blinded
Blinding description
To blind the participants, a placebo will be used with packaging, color, size and other appearance characteristics completely similar to curcumin-piperine tablets. In order to blind the evaluators of the research team, as soon as the treatment or control group is determined in the randomization stage, a random code will be assigned to the participant (without including group A or B on the file) and they will be followed by this code in any stage of research. Finally, after evaluating and documenting the results ,the codes will be decoded.
Placebo

Health conditions studied

1

Description of health condition studied
cystic fibrosis
ICD-10 code
E84
ICD-10 code description
Cystic fibrosis

Primary outcomes

1

Description
Evaluation of clinical symptoms of patients
Timepoint
In each visit
Method of measurement
Based on Shwachman-Kulczycki Score

2

Description
Evaluation of pulmonary symptoms
Timepoint
Every 3 to 6 months
Method of measurement
Based on spirometry

3

Description
Evaluation of Pseudomonas pulmonary infection
Timepoint
Every 3 months
Method of measurement
With nasopharyngeal swab sample (sputum culture and colony count)

4

Description
Weight
Timepoint
In each visit
Method of measurement
Weighing scale

5

Description
Height
Timepoint
In each visit
Method of measurement
Meter

6

Description
Body mass index (BMI)
Timepoint
In each visit
Method of measurement
Body weight (kg) divided by the square of the body height(m)

7

Description
Evaluation of patients' quality of life
Timepoint
Yearly
Method of measurement
Based on the quality of life questionnaire of cystic fibrosis patients

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: the intervention group are cystic fibrosis patients with pseudomonas infection who are treated with curcumin-piperine in addition to the usual treatments for cystic fibrosis. The duration of the treatment period will be 3 months. Curcumin-piperine is prepared in the form of 500 mg capsules with 5 mg of piperine as an absorption enhancer (Sami Labs Ltd., India) and is given to cystic fibrosis patients along with the usual treatments.
Category
Treatment - Drugs

2

Description
Control group: The control group are patients with cystic fibrosis who are treated with placebo in addition to the usual treatments of cystic fibrosis. placebo tablets containing microcrystalline cellulose matched in size, shape and color to the curcuminoids tablets
Category
Placebo
