Effect of diaphragmatic breathing exercise and progressive relaxation technique in patient having preeclampsia.

Protocol summary

Study aim

To evaluate the effectiveness of diaphragmatic breathing exercises and progressive relaxation techniques in patients having preeclampsia.

Design

The design of this study is Randomized, parallel Controlled Trial. Randomization is done by lottery method. In this method, the researcher gives each participant of the trial a number. Researchers draw numbers from the box randomly to allocate participants in two groups

Settings and conduct

This study is conducted at Arif Memorial Hospital. In this trial participants are blinded through concealment to avoid biasness.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Systolic BP \geq 135 mmHg or diastolic BP \geq 85 mmHg Preeclampsia female diagnosed by a physician Age group 25-40 Exclusion criteria: Chronic hypertension Contraction or leakage of fluid during the study Bleeding , heart disease, and renal diseases

Intervention groups

All the subjects of the sample will be allocated to two groups randomly. Group A: Diaphragmatic breathing exercise , progressive relaxation technique and routine hypertensive medication Group B: only receive routine hypertensive medication

Main outcome variables

Arterial blood pressure, Oxygen saturation.

Scientific title

Effect of diaphragmatic breathing exercise and progressive relaxation technique in patient having preeclampsia.

Public title

Effect of diaphragmatic breathing exercise and progressive relaxation technique in patient having preeclampsia.

Purpose

Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Systolic BP \geq 135 mmHg or diastolic BP \geq 85 mmHg
Preeclampsia female diagnosed by physician
Exclusion criteria:
Chronic hypertension Contraction or leakage of fluid during study Bleeding ,heart disease and renal diseases

Age

From **25 years** old to **40 years** old

Gender

Female

Phase

N/A

Groups that have been masked

Sample size

Target sample size: **26**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients were allocated into two groups i.e.; Group A and Group B, by lottery method. Lottery method is a type of simple random sampling. In this method, each participant of the trial is assigned a unique number. In the next step these numbers are written on separate cards which are physically similar in shape, size, color etc. 30 cards were used. Then they are placed in a basket and thoroughly mixed. In the last step the slips are taken out randomly without looking at them and are placed into two sets randomly. Total of 26 cards were taken out, 13 participants in each group.

Blinding (investigator's opinion)

Single blinded

Blinding description

The blinding is achieved by concealment in which the treatment allocation for each patient is not revealed to the patient. This is done to avoid biasness.

Placebo

Not used

Assignment

Parallel

Health conditions studied

1

Description of health condition studied

Pre-eclampsia

ICD-10 code

O14.00

ICD-10 code description

Mild to moderate pre-eclampsia, unspecified trimester

Primary outcomes

1

Description

Blood Pressure

Timepoint

Pre and Post 1 Month

Method of measurement

Manual sphygmomanometer was used to evaluate blood pressure

2

Description

Oxygen Saturation

Timepoint

Pre and Post 1 Month

Method of measurement

Pulse oximeter is used to measure oxygen saturation

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group will receive Diaphragmatic breathing exercise , progressive relaxation technique and routine hypertensive medication. Progressive muscular relaxation technique will be performed by Conscious removal of tension from the muscles: Contractions start from the hands to the sole muscles (each muscle group was contracted for 5-7 sand then relaxed for 30-40 s). Then make Fist and tighten your hand, then relax. Now Push the elbow down on the chair and then relax arm. Raise your eyebrows and wrinkle your forehead, then relax your forehead. Furthermore, Close your eyes tightly, then open slowly. For Muscles of the central part of the face, Cross your eyes and pull the nose upwards. Moreover, to relax the lower part of face, jaw and neck,

Tie your teeth and tighten the corners of your mouth, then relax. For Shoulders, Raise your shoulders as if you want to touch the ears, then relax. Chest and abdomen muscles can be relaxed by taking a deep breath and hold it, then exhale (Abdominal muscle contraction was avoided due to avoiding preterm labor contractions in this study). For Legs muscles, Pull your toes down, away from your body, and then relax. Furthermore, for anterior thighs, Contract the muscles above and below the thigh and then relax. For Hamstrings muscle Push heels down into floor ,tighten hamstrings muscles and relax. Lastly For Calves, Points toes toward head and relax. Curl toes toward the bottom of feet and relax. At the Completion, Check the whole body for the remaining tension, If you experience tension or pressure in certain muscles, repeat the muscle contraction and relaxation for that group of muscles. Diaphragmatic Breathing will be done by Getting comfortable. You can lie on your back in bed or plinth with a pillow under your head and knees. Or you can sit in a chair with your shoulders, head, and neck supported against the back of the chair and Breathe in through your nose. Let your belly fill with air. Then Breathe out through your nose. Now, Place one hand on your belly and the other hand on your chest. As you breathe in, feel your belly rise. As you breathe out, feel your belly lower. The hand on your belly should move more than the one that's on your chest. Take three more full, deep breaths. Breathe fully into your belly as it rises and falls with your breath. The technique will be applied for 3 days a week, and a single session will be 20 minutes. 5 minutes for diaphragmatic breathing exercise and 15 minutes for progressive relaxation technique
