Effectiveness of Ailurophobia treatment by virtual reality compared to metacognition treatment

Protocol summary

Study aim

Effectiveness of Ailurophobia treatment by virtual reality compared to metacognition treatment

Design

A clinical trial with a control group, with parallel groups, double-blind, randomized, on 28 patients, is used for randomization by permutation randomization block method.

Settings and conduct

Outpatient clinic of Ibn Sina Hospital uses random permutation block method for random allocation, the analyst & allocator of sample to groups will be unaware of intervention & control groups. Each group has 8 sessions of 45 minutes in 8 weeks, 1 time per week are treated. Group1 will be treated with virtual reality with cat scare software. Group2 is subjected to metacognitive therapy. Before treatment, session 4 & at end of treatment, 1 & 3 months follow-up will be evaluated by Kettle questionnaire & author of construction of ailurophobia.

Participants/Inclusion and exclusion criteria

Entry conditions: Patients who have been confirmed according diagnostic interview have criteria of fear of cats for at least 6 months. are in range of 18 to 45 yrs. and are satisfied to participate in this research. Conditions of non-entry: patients who absent for more than 3 sessions in treatment sessions, alcohol or drug addiction, other mental and physical problems at same time, are being not interested

Intervention groups

After approval of psychiatrist to diagnose patient, patients will placed in 2 groups of 14 people aged 18 to 45, men & women. Group 1 will be treated with virtual reality technique with fear of cats software. Group 2 is subjected to metacognitive therapy. Before treatment, 4th session, at end of treatment, 1 & 3month follow-up of Kettle's anxiety questionnaire & creation of ailurophobia questionnaire will be done.

Main outcome variables

Evaluation level of anxiety & avoidance at beginning of intervention, weeks 4th, 8th (the end of the intervention), 12th & 20th to follow the effect of treatment

Scientific title

Effectiveness of Ailurophobia treatment by virtual reality compared to metacognition treatment

Public title

"Effectiveness of Ailurophobia treatment by virtual reality"

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Patients who have been confirmed according to the diagnostic interview based on the relevant symptom checklist in the fifth edition of the disorder diagnosis, diagnostic and statistical manual of specific phobias (fear of cats) Patients who meet the criteria of fear of cats for at least six months Patients who are in the age range of 18 to 45 Patients are satisfied with participating in this research

Exclusion criteria:

Patients who are absent for more than three sessions in treatment sessions Patients who are dependent on alcohol or drugs Patients who have other mental and physical problems at the same time Patients who are treated with other methods of drug therapy and psychotherapy during the trial period Patients who do not want to continue treatment for any reason

Age

From **18 years** old to **45 years** old

Gender

Both

Randomization (investigator's opinion)

Randomized

Randomization description

Permutation random block method is used for random allocation. In this method, 7 blocks of 4 will be randomly selected from the combination of letters A and B. These blocks are AABB, ABBA, BBAA, BAAB, ABAB, BABA. Allocation of letters A and B to treatments will also be done randomly before randomization

Blinding (investigator's opinion)

Double blinded

Blinding description

Our method is to use a central service. This service consists of people who work in the center and have no knowledge of the researchers' research, and they will do the secret allocation for the research, that is, the analyst and the sample allocator will be unaware of the intervention and control groups.

Intervention groups

1

Description

After the approval of the psychiatric specialist for the diagnosis of the patient, the patients are placed in 2 groups of 14 people between the ages of 18 and 45, male and female. Each group is treated during 8 sessions of 45 minutes in 8 weeks, once a week. The follow-up will be one month and three months. The first group will be treated with the virtual reality technique with the fear of cats software
