Iranian Registry of Clinical Trials

09 Jun 2026

Comparison the Effect of Teaching Ethical Principles by the Narration and Peer education Methods on Sensitivity and Ethical Courage of Nurses

Protocol summary

Study aim

Determining the effect of teaching ethical principles in narrative and peer education on sensitivity and moral courage of emergency nurses in selected military hospitals in Kermanshah

Design

This study is a controlled clinical trial research that will be conducted using a pretest-post test design with a control group of parallel groups. It has been randomized by throwing dice. The number of samples according to the standard deviation and average of the previous study and with 95% confidence and 90% test power are estimated to be 13 people in each group and 39 people in total.

Settings and conduct

Ethical principles will be taught to the emergency department nurses of Kermanshah military hospitals, who will be divided into two test groups 1 and 2 and a control group by using two methods of peer training and storytelling.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Have at least a bachelor's degree in nursing; At least one year of experience in the emergency department Exclusion criteria: Unwillingness to participate in further study

Intervention groups

For the experimental group 1 six 45-minute sessions of counseling in a suitable and comfortable environment in the research environment are taught by the researcher. Also, in the experimental group 2 in order to provide the necessary training for the participants of the group will be held virtually, the training will be presented in six 45-minute sessions in the Sky room software space so that the members of the group have enough opportunity to receive, discuss and exchange information and at the end of the meetings will be summed up and the correct answers will be provided to the participants. After completing the study, an educational CD containing the content of ethical education presented to the

experimental groups will be donated to the control group.

Main outcome variables

moral sensitivity ; moral courage

Intervention groups**1****Description**

Intervention group: For the experimental group 1 (peer-to-peer) six sessions of 45 minutes of consultation in a suitable and comfortable environment and observing the distance and health protocols to prevent COVID-19 in the research environment, by the researcher, the graduate student of emergency nursing and having 8 years of clinical work experience in the emergency department who has passed the ethics training courses and will be presented in accordance with Table 2. It should be noted

that in order to observe ethics in research, the time and place of counseling sessions will be determined in coordination with the participants. The training method was questions, answers and group discussions. The training content of these sessions is as follows: First session Statement of course objectives, introduction to ethical theories with nursing approach and the importance of ethics in the nursing profession! The second session is a review of the contents of the previous session, the principle of respect for patient autonomy, including informed consent, confidentiality and privacy! The third session is a review of the contents of the previous session, the principle of benefit, including honesty in providing treatment and care services and building trust in the patient! The fourth session is a review of the contents of the previous session, the principle of doing no harm : The fifth session is a review of the contents of the previous session, the principle of justice with the axes of respect for human dignity and distributive justice ! The sixth training session of patient ethics charter and patient support
