The effect of resistance training and sour tea (*Hibiscus sabdariffa*) consumption on leptin and adiponectin adipokines in hypertensive elderly men

Protocol summary

Study aim

The effect of 12 weeks of resistance training and sour tea consumption on body composition variables (weight, waist-to-hip ratio, fat percentage, body mass index), hemodynamic markers (systolic and diastolic blood pressure) and biochemical markers (leptin and adiponectin) is associated with high blood pressure in elderly men.

Design

A clinical trial with a control group, with parallel groups, unblinded, randomized, in four groups: resistance training, sour tea, resistance training + sour tea, control. The research randomizer software (www.randomizer.com) will be used for randomization.

Settings and conduct

The subjects of the resistance training and resistance training+sour tea groups performed the resistance training protocol for 12 weeks (3 days per week). Also, the subjects of the sour tea and resistance exercises + sour tea group will consume sour tea 2 times a day (each time 2 grams in 240 ml of water) for 12 weeks. All sports exercises will be done in the sports club, and Other measurements, such as blood sampling, will be performed in the cardiology clinic under the supervision of a specialist doctor.

Participants/Inclusion and exclusion criteria

Inclusion criteria: male, over 65 years old, suffering from high blood pressure, using controlled blood pressure drugs. Complete the informed consent form. Exclusion: history of cardiovascular surgeries, including balloon surgery, known metabolic and inflammatory diseases, consumption of alcoholic beverages and cigarettes, use of beta blockers, and participation in regular sports activities in the six months leading up to the study.

Intervention groups

Four groups: resistance training, sour tea, resistance training+ sour tea, control

Main outcome variables

Hemodynamic (systolic and diastolic blood pressure), body composition (weight, waist-to-hip ratio, fat percentage, body mass index), and biochemical (adiponectin and leptin) markers.

Scientific title
The effect of resistance training and sour tea (Hibiscus sabdariffa) consumption on leptin and adiponectin adipokines in hypertensive elderly men

Public title
Effects of resistance training and sour tea consumption on hypertension

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
Men aged between 55 and 70 years Hypertensive Taking hypertension drugs Completion of the informed consent form
Exclusion criteria:
using beta blockers drugs having a history of heart surgery suffering from metabolic diseases alcohol participating in regular physical activities in the six months before the time of the study smoking suffering from inflammatory diseases

Age
From **65 years** old

Gender
Male

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
In this research, subjects are selected by Simple randomization by the random allocation rule. After determining the sample size, they will be equally divided into 4 groups. Using the lottery method, the names of the subjects are written on separate papers and placed in a container, then the names of the subjects are randomly taken out and placed in the intervention groups or placebo, respectively.

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied

Hypertension

ICD-10 code

Essential

ICD-10 code description

I10

Primary outcomes

1

Description

systolic an diastolic blood pressure

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

Sphygmomanometer and stethoscope

2

Description

Serum leptin levels

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

Using the human ELISA diagnostic kit related to the variable

3

Description

adiponectin

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

Using the human ELISA diagnostic kit related to the variable

Secondary outcomes

1

Description

Weight changes

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

scale

2

Description

Waist to hip ratio

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

tape meter

3

Description

Body mass index

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

Bioelectrical impedance device

4

Description

Fat index

Timepoint

At the beginning of the study (before the start of the intervention) and 12 weeks after the start of exercise or supplementation

Method of measurement

Bioelectrical impedance device

Intervention groups

1

Description

Intervention group: The training group will do 12 weeks and 3 sessions of resistance training program every

week. Resistance exercises include 9 exercises (2 sets/12-15 repetitions) plus 10 minutes of warm-up and cool-down before and after exercise. The main training phase includes upper body exercises (chest press, latissimus dorsi pulldown, back row, biceps curl), lower body exercises (leg press, leg extension, leg curl) and middle body exercises (abdominal crunch, lower back extension). .

Category

Prevention

2

Description

Intervention group: Sour tea group for 12 weeks and daily consumption of 2 grams of sour tea dissolved in 240 ml of water.

Category

Prevention

3

Description

Intervention group: resistance exercises + sour tea for 12 weeks and will do resistance exercises 3 times a week. Resistance exercises include 9 exercises (2 sets/12-15 repetitions) plus 10 minutes of warm-up and cool-down before and after exercise. The main training phase includes upper body exercises (chest press, latissimus dorsi pulldown, back row, biceps curl), lower body exercises (leg press, leg extension, leg curl) and middle body exercises (abdominal crunch, lower back extension). . In addition, every day, 2 servings of sour tea will be consumed in the amount of 2 grams dissolved in 240 ml of water.

Category

Prevention

4

Description

Control group: The control group does not do resistance exercise and does not consume sour tea.
