

Clinical Trial Protocol

Iranian Registry of Clinical Trials

22 Sep 2026

Evaluating the effect of curcumex supplement on the symptoms of patients with COVID-19

Protocol summary

Study aim

The effectiveness of Corcomex in reducing the symptoms of Covid-19

Design

This clinical trial has a control group, double-blind, randomized, in phase 2 and on 100 people. The method of randomization was simple randomization.

Settings and conduct

The study was conducted in the city of Sari. The study was double-blind, where the researcher, participants and data analysts were blind.

Participants/Inclusion and exclusion criteria

Inclusion criteria: patients who had a ground glass opacity in the lung CT scan, Clinical symptoms of COVID19, having a history of contact with a corona patient, recent travel to high-risk areas, People who had a positive PCR result. Exclusion criteria: patients who were not able to take the medicine orally and the patient's lack of satisfaction in participating in the study.

Intervention groups

Both groups will receive routine medications prescribed for outpatients. In addition to these treatments, one group will receive Curcomex capsules daily, and the control group will receive a placebo.

Sample size

Target sample size: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

The method of randomization was simple randomization, which was done using a table of random numbers. After determining the framework of the statistical population, among the 60 participants identified by numbers 1-60, 30 numbers are randomly extracted using the random number table, and these 30 participants are placed in the intervention group in the order of entry into the study as For example, if the numbers 3, 4, and 10 are obtained from the table of random numbers, it means that the third, fourth, and tenth patients included in the study will be in the intervention group, then the intervention group was given medicine and the control group was given placebo, which is both placebo and Both drugs were in completely similar packages.

Blinding (investigator's opinion)

Double blinded

Blinding description

The present study was conducted in double blinded, in which the main researcher, health personnel involved in the study, participants and data analyzer were blind. The participants were divided into intervention and control groups, in addition to normal treatment, intervention group take medication and control group take placebo. medication and the placebo were in the form of capsules with the same color, shape and size and were distinguished only by inserting a batch number.

Description of health condition studied

COVID-19

ICD-10 code

U07.1

ICD-10 code description

COVID-19, virus identified

Primary outcomes

1

Description

Investigation of the improvement rate of clinical symptoms of patients including cough, dyspnea, weakness, fever and diarrhea one month after take medication.

Timepoint

At the beginning of the study and one month later

Method of measurement

history and physical examination

Secondary outcomes

1

Description

White blood cell counts

Timepoint

At the beginning of the study and after 30 days from the start of taking medication

Method of measurement

lab data

2

Description

ESR

Timepoint

At the beginning of the study and after 30 days from the start of taking medication

Method of measurement

lab data

3

Description

CRP

Timepoint

At the beginning of the study and after 30 days from the start of taking medication

Method of measurement

lab data

4

Description

Comparison of the effect of Curcumex treatment on changes in serum creatinine

Timepoint

At the beginning of the study and after 30 days from the start of taking medication

Method of measurement

lab data

5

Description

Comparison of the effect of Curcumex treatment on changes in liver enzymes

Timepoint

At the beginning of the study and after 30 days from the start of taking medication

Method of measurement

lab data

Intervention groups

1

Description

Intervention group: In the intervention group, 30 patients were treated with Curcumex, which is a combination of three ingredients (320 mg of turmeric, 150 mg of ginger, and 4 mg of black pepper) in capsule form. This drug was developed by the Department of Pharmacology of Jundishapur University of Ahvaz. this medication use twice daily, which lasts up to 30 days. During the treatment period, patients will have three visits for training and control of clinical symptoms and laboratory findings.

Category

Treatment - Drugs

2

Description

Control group: In the control group, 30 patients were treated with placebo, which was similar in appearance to the original drug. This drug was developed by the Department of Pharmacology of Jundishapur University of Ahvaz. this medication use twice daily, which lasts up to 30 days. During the treatment period, patients will have three visits for training and control of clinical symptoms and laboratory findings.

Title and more details about the data/documentAfter the end of the study, according to the rules of the
Ethics Committee of the Ministry of Health, the non-
identifiable data of the participants in the study will be
published in a limited manner in the dissertation and
article.**When the data will become available and for how long**The data access period starts one month after the
publication of the study results.**To whom data/document is available**The data of this study will be available to researchers
working in academic and scientific institutions.**Under which criteria data/document could be used**

The documentation of this study will be made available to other researchers for the purpose of conducting further research and for the purpose of using them in the production or development of drugs effective against the Covid-19.

From where data/document is obtainable

The office of Dr. Gholamreza Houshmand is located at km 18 of Farah Abad Road, Department of Pharmacology, Faculty of Medicine.

Email:Dr.houshmand_pharma@yahoo.com

What processes are involved for a request to access data/document

After receiving the request via email stating the need to receive data, this request will be reviewed by the main researcher and after the request is approved, the data will be sent.
