Comparison of Split thickness skin graft fixation with pressure dressing and stapler fixation in burn

Protocol summary

Study aim

Determining and comparing the status of healing quality in two methods of pressure dressing and stapler

Design

This study will be conducted as a clinical trial on 30 samples. Free skin graft surgery will be performed in two burn areas by pressure dressing and stapler method and after five days, the dressings are opened and will be studied.

Settings and conduct

The present study will be conducted in the burn department and operating room of Imam Khomeini (RA) hospital in Ardabil. People will be included in the study according to the inclusion criteria, and free skin grafting surgery will be performed in two burn areas using pressure dressing and stapler method, and after five days, the dressings will be opened and grips of the two. The area in terms of necrosis, infection, displacement, and finally got the appropriate quality (based on the examination and judgment of the surgeon) will be recorded in two areas of the studied burn.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1. Patients with 2nd and 3rd degree burns 2. Patients in the age range of 30-60 years 3. Not taking immunosuppressive drugs 4. Not suffering from underlying diseases (diabetes, chronic Renal failure, etc.) 5. Absence of addiction and heavy consumption of tobacco 6. Taking informed consent Non-entry criteria: 1.A burn with an extent of more than 50% that it is not possible to remove the healthy skin as a scar

Intervention groups

Free skin grafting surgery will be performed in two burn areas using pressure dressing and stapler method, and after five days, the dressings will be opened and the grafts in the two areas will be moved in terms of necrosis, infection, and finally it will be of good quality (according to the examination). and the surgeon's judgment (will be studied in two areas of burn).

Main outcome variables

Necrosis, infection, displacement

Health conditions studied**1****Description of health condition studied**

Burn

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Skin graft in terms of necrosis

Timepoint

During surgery, 5 and 7 days after graft

Method of measurement

The grafts of two areas will be studied in terms of necrosis, and finally the quality of scars (based on the examination and judgment of the surgeon) in the two areas of the burn.

2**Description**

Skin graft in terms of infection

Timepoint

During surgery, 5 and 7 days after graft

Method of measurement

The grafts of two areas will be studied in terms of infection, and finally the quality of scars (based on the examination and judgment of the surgeon) in the two areas of the burn.

3**Description**

Skin graft in terms of necrosis

Timepoint

During surgery, 5 and 7 days after graft

Method of measurement

The grafts of two areas will be studied in terms of displacement and finally the quality of the grips (based on the examination and judgment of the surgeon) in the two regions of the burn.

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Free skin grafting surgery will be performed in two burn areas using pressure dressing and stapler method, and after five days, the dressings will be opened and according to the regulatory questionnaire, the two areas will be affected in terms of necrosis, infection, and displacement. It was taken and finally the quality was taken (based on the surgeon's examination and judgment) in two areas of the studied burn.
